Skule (skool) n. 1. A play on the word "school". 2. Trademarked synonym for University of Toronto Faculty of Engineering. 3. A strange phenomenon that occurs in nature guided by the inexplicable force of "spirit" and largely consisting of the most exceptional beings on the universe.

Perspective

It's 8 a.m. I step out the door and head towards the bus stop. On my way, I notice the frost on my breath; the partially snow-covered lawns and bare hedges; the neighborhood kids all bundled up, walking in their little groups, talking and laughing hysterically on their way to school; and the rising sun against a bluing sky. By this time, I'm already at the bus stop waiting for the rush of the day to begin. On the other side of the street, the familiar red and white vehicle pulls up, waits a few seconds, and pulls away revealing five fellow commuters, anxious to cross the street and rush into the seven-storey building towering behind me. I get on the bus which whizzes me away to the station. The train soon arrives, then heads towards the darkness of the tunnels again. This is my time to relax. I look at the people around me. Tired. Sleepy. Always rushing to get somewhere—now the norm of life. Events can change your life, what you believe in, and your priorities.

I've learnt quite a lot in my three years here. The most important is that money runs this world, no matter how much I don't think it should. It forces many of us to perform well in school in order to get a good(-paying) job. It forces us to then push on for a promotion and a better(-paying) job. It makes us stressed. It runs our lives. However, there are pros as well. Money provides the means to help people in need; it has encouraged research to make our lives better; and it has made many enjoy a more comfortable life. It is obvious what drives us—a need to survive in this fast and ever-changing world; to make money to pay the bills. Both my parents work an 84-hour week. I'm proud of how far they've gotten in life, considering that they did not have the opportunities that I have.

As you look back on this yearbook several years from now, I can only hope that your life turned out just the way that you wanted it to and that you are deliriously happy. As engineers, we are consistently driven to do well and be movers and shakers in this world. It is a demanding profession. Be a hard worker. Go the extra mile. Get involved. Help others in need. We must, however, also remember some other things. Slow down. Be true to yourself and what you believe in. Treat others as you would like to be treated. Be honest to others. Forgive others. Forgive yourself. Take time out for yourself. Take time out for your support group—your family and friends. Enjoy life. Stop to smell the roses. Feed the mind, body, and soul. When we leave this world, we do not look back on what we have accomplished materialistically, we look at how happy we've been and how happy we've made others. Balance is the key.

Choo Ching Yi
MECH9T8
Skule™Book 9T7 Editor-in-Chief

Many thanks to the most dedicated members of the Skule™Book: Zoher Bhujwalla, Margaret Cyran, Melanie Duhamil, Julian Dunn, Farnaz Ghadaki, Sameer Khushal, Danny Loo, Beny Spensieri, Daisy Chan Tam, Tracy Yang, and Stanis Yu. Thanks also to the people who, through their kindness and generosity, have made my life a little more bearable this year while working on the Skule™Book: Neeraj for the fries and chicken fingers; Billy for the grape juice, cookies, and banana; Jacob for the drink; and The Three Stooges/Musketeers (and the new stooges) for being there when I need you guys the most.

This book is dedicated to the memories of:
Choo Young (Dec 1925 - March 1995) and Young Wu Feng (Sept 1910 - May 1995)
and to the people and experiences that have shaped my life.

Duck, Duck, Duck, Goose...
Faculty

*n. 1.* The feared and revered members of a higher order who come to Skule™ to illuminate the lives of poor engineers. *2.* Omnipotent beings to whom you must sacrifice souls and Friday nights in order to be blessed with the almighty IRON RING.
Congratulations! You have successfully completed another year of Engineering! Three quarters of you will be returning next year. You are the lucky ones. The other unlucky one quarter must be prepared to deal with real life.

From what I’ve heard, you graduating students who have been involved in extra-curricular activities throughout your University years will find the transition to working life much easier. You are supposed to have more highly developed social, communication, and time management skills. For those students returning to Skule™, I can’t stress the importance of extra-curricular involvement enough.

The Engineering Society has made every effort to broaden the horizons of students who are involved with the Society. I think we are succeeding. We have not only implemented new and exciting events, but we have left next year’s executives with a long list of recommendations on how to further improve the participation rates.

You students who are graduating this year will have the honour of boasting that you are U of T Engineers! You come from a school of tradition and quality which is one of the best in the world. For those of you not graduating, good luck in the years to come and have a good time. Remember, you will have more fun if you are involved!

I look forward to meeting you all again in the years to come!

Franny Jewett, CIV 9T7
President
Engineering Society

It is with great pleasure and pride that I congratulate you, on behalf of over 22,000 Alumni, as you complete your undergraduate studies at Canada’s premier Engineering Faculty.

Whether you are planning to continue your studies, enter the business world, or tackle other challenges, you will find the careful analytical thought processes that you have utilized to solve technical problems as an undergraduate will serve you well in the future. The hard work, dedication, and perseverance that you displayed as a student are the same qualities required in the next phase of your development or your new career. The problem solving skills, communications and the team work that you have learned and practiced at Skule™, will all prove to be valuable life long assets.

I am pleased to welcome you as an Alum and a member of the Engineering Alumni Association. You become a member of a group of over 22,000—located not only across Canada, but around the world. You now share a common bond with this group and you will find that the friendships you have made at Skule™ will be lifelong. I challenge you to continue to support your Alma Mater and to welcome every opportunity to return to the University as an Alum to renew acquaintances.

Best regards in your future endeavors and we look forward to seeing and meeting you at Alumni events.

Bob MacCallum, 6T9
President
Engineering Alumni Association
I take pleasure in having the opportunity to speak to you all, especially the graduates of 1997, through the pages of the yearbook.

You came here and studied with high expectations for your future careers. Many exciting opportunities await you upon graduation; be prepared to consider unusual or special opportunities, such as small companies looking for bright engineers with ideas or international work assignments. In this way, many of you will be able to create your own futures; even consider starting your own company!

I continue to be impressed and proud of the achievements of the Engineering Society and its contributions to the Faculty and the University as a whole. I look forward to the Society building on this success in the future years. The multi-cultural makeup of our country is reflected in the student body of the Faculty, and it is by the enthusiastic participation of each one of you in the Engineering Society and its events, such as Skule™ Nite, the Skule™ Stage Band, the ever popular LGMB, sports activities, and other events, that new students can be integrated into a strong and cohesive community. While orientation is a very positive experience overall, there are some elements which can still be changed for the better.

Back in 1978, engineering students were precedent setters on campus by initiating the special Annual Levy, and you have followed in their footsteps and helped to maintain and improve the undergraduate teaching laboratories and other aspects of the undergraduate experience. The Provost is now providing an additional $50.00 for each $100.00 student levy so that the overall impact is greatly enhanced. Indeed, the Provost has agreed to this match all the way up to the year 2000 provided, of course, the levy is continued.

And, to those of you who are graduating, I first thank you for your continued support through the GRADitude campaign. Beyond this, I ask you to get involved in the Engineering Alumni Association and, most of all, promote Engineering at U of T whenever you get the chance.

You are about to be a member of a proud and distinguished group of alumni, many of whom have become leaders of the business, industrial, and research communities around the world. This network can be invaluable as you develop your careers.

My good wishes for success go with you as you seek your fortunes in a “global economy”. Please keep us informed on your progress. We will value hearing from you, and any advice now or later will be taken seriously.

Michael E. Charles
Dean
Faculty of Applied Science & Engineering
It hardly seems a year since last I wrote for this journal. That's the strange thing about getting older—you get slower and time gets faster. I suggest that those of you in first year remember this when you look forward to your time with us. The four years, in retrospect, will be so short—just ask any current fourth-year. Anyway, enough homespun philosophy!

It is my pleasure to bring greetings to all of our students, but especially to wish “Bon Voyage” to the graduating class. The small regret that I have is that I don’t get to know all of you. That’s what happens in a large school.

At Orientation, I said that my door is always open. I am happy that many students have taken me at my word and dropped by. Visits have included those who had serious problems—some personal, some academic—and the fellow who had a job interview coming up and needed to learn how to tie a necktie. As you may well appreciate, I am never bored!

When you graduate, you will automatically become a member of the Engineering Alumni Association, so I thought a few words about who we are and what we do would be appropriate. In broad terms, the objective of the Alumni Office is to achieve maximum personal and financial support for the Faculty from alumni and from you, the alumni of the future. This involves the following:

- Managing the Engineering Annual Fund, which raises about $700,000 for Skule™ each year.
- Coordinating the Engineering GRADitude campaign. The Class of 97 set a record when 93% of them pledged $113,000 to Engineering over the next three years.
- Overseeing the affairs of the Engineering Alumni Association, as well as its related committees and functions.
- Organizing the annual Engineering Open House.
- Organizing the Fall Homecoming and Spring Reunion. These two events bring a thousand or more alumni back to campus each year.
- Arranging funding for the Engineering Society. Every year, the Engineering Alumni Council provides nearly $30,000 for various student activities.
- Writing for the Engineering Alumni Report. This is sent to twenty thousand U of T Engineering alumni four times a year.
- Maintaining a detailed, computerized record system of our alumni, donors, and Iron Ring recipients.
- Conducting the affairs of the Office of the Camp Wardens, those who are responsible for the annual Iron Ring Ceremony.
- Serving as unofficial ombudsman for undergrads who encounter academic and/or personal difficulties.

I also play the organ for the Engineering Convocation each June—a great way to bid farewell to our graduates.

Remember, it is through this office and its various publications that you will keep up your Skule™ Spirit. Many alumni who graduated sixty or even seventy years ago thrive on it. You are always welcome back, so keep in touch. You won’t regret it!
To the Class of 9T7:

Congratulations on completing 4+ years—many of you probably feel that you have written your last exam, and that you are now going to enter the phase II (post-education) portion of your life. In fact, it is more complicated than that. You will be expected by your employer and by society to keep up with the rapid developments in your engineering field. This is difficult to do when you are a full-time student; it is even more difficult when you have a full-time job and further demands on your time at home. Most of you have seen how your own parents or grandparents are completely mystified by the material that you have learned in your 4 years here—you could be in their position in 25 years if you don’t make the time and effort to stay knowledgeable on engineering developments.

Engineering students are justifiably proud of their choice of career, and the important position they are destined to play in society. By contrast, practising engineers tend to stay in the background in North American society, such that the members of the public are unsure of our exact role. I hope you will consider how you can improve the visibility and reputation of the engineering profession when such opportunities are available—that way, more high school students will decide to follow in your footsteps.

On behalf of the staff in the Registrar’s Office, I would offer congratulations to the Class of 9T7 for making it through four years of the most challenging course of study.

We continue to be committed to improving our student information systems. Sally Cumming, our Manager of Student Services, has been seconded as a Senior User Representative, to assist the Student Records System team in building a system to meet the needs of the academic and administrative divisions of the University. Preliminary work on the Student Records System has begun and we look forward to contributing our resources on a number of important re-engineering initiatives over the course of the next three years.

Meanwhile, Staff in the Registrar’s Office continue to look for ways to improve and streamline registration, pre-registration, and all the activities that occur in GB157. For example, this year, upper-year students were able to retrieve their summer course grades from the Student Telephone Service (STS) and a pilot project was implemented to provide students with the opportunity to change their address on the U of T Web site. In early to mid-January, students will be permitted to access their first-term course grades on STS.

We will continue to use technology to improve efficiency and effectiveness of the services we deliver to the student body. As you reflect on your four years at U of T and your interaction with this office, you might very well have some very good ideas on how we might serve you better. Please feel free to come and speak to me at any time. You can even drop a note if you wish.

Once again, congratulations to the Class of 9T7 and good luck to the remaining undergrads.
On behalf of the academic staff, the administrative staff, and the continuing students associated with the Department of Mechanical and Industrial Engineering, I would like to offer my congratulations to the graduating class of 1997. We hope that we have made some small, but meaningful contribution towards the success of all of you, and significant contributions to those of you who are graduating from the Mechanical Engineering Program and from the Industrial Engineering Program.

Following the merger of the two originating departments to form the Department of Mechanical and Industrial Engineering, much planning and many changes have taken place. During 1996, extensive strategic planning sessions were held from which many useful initiatives arose. These initiatives are currently being implemented, and all of them are intended to enhance the two distinct programs which are offered through the auspices of the department—namely, the Mechanical Engineering Program and the Industrial Engineering Program. Throughout the strategic planning process, alumni of our programs have been heavily involved. The assistance and support of our alumni are very important to us, and we hope that you will continue your association with your Alma Mater through the Alumni Association.

The Student/Staff Council continues to be a valuable body for communicating to and from the student body, as well as in arriving at important decisions which affect the student body. In the latter context, one of the important issues which is handled by the Student/Staff Council relates to usage of the Student Levy Fund. The Student/Staff Council solicits proposals for projects (laboratory equipment, etc.), then prioritizes the submissions, and oversees the entire process. My thanks go out to the members of the Student/Staff Council, and in particular the Chairs of the Mech Club and the Ind Club. For 1996/97 the Mech Club Chair was Vincent Luciani and the Ind Club Co-Chairs were Aldo Angel, Errol Cerit and Al Marchesi.

To the Class of 9T7, we express our sincere congratulations and best wishes. We hope that you are proud to be a graduate of one of our programs, and I can assure you that we are very proud of you.

Information, whether it is being transmitted as an electrical or optical signal or being processed inside a computer, is at the heart of the modern discipline of Electrical and Computer Engineering. The central role that information plays in today’s economy means that the future of the discipline could not be brighter. However, all of us who are involved in this fascinating field must be prepared to keep up with the breath-taking pace with which it evolves. On the one hand this means that our curriculum must continue to change; on the other, it means that we must strengthen, even further our understanding of the underlying fundamentals. It is only through this understanding that we can keep pace with new developments and become leaders in a highly competitive environment.

Our two programs continue to attract a large number of top students. This year, we admitted a total of 229 new students in first year. An important contributor to the strength of the two programs is the way they complement each other. Today’s graduates must have a broad base of knowledge, covering topics ranging from software to hardware and system issues, and the size of our Department enables us to offer a large number of courses that provide excellent coverage of the field. Today’s catch phrase is “life-long learning.” Regardless of which of the two programs you choose to follow, you will acquire an excellent preparation and a basis on which to build your career.

You will notice construction work on the first floor of the Galbraith Building later this year. This is the first phase of the renovations needed to accommodate the increase number of students in the Computer Engineering program. A new microprocessor laboratory is being created to receive students in September 1997.

I would like to acknowledge your financial support through the Levy Fund, which is helping provide equipment for all our laboratories and for the Design Centre. The Provost has agreed to provide 50% matching for these funds, which means that your contribution will go that much further. Your contributions to last year’s GRADitude campaign have reached a record high. We are all proud of the excellent spirit that this represents.

The Electrical and Computer Club is continuing its excellent roster of activities under the able leadership of James Maligeorgos and Tony Lacavera. I am delighted to see the high participation in club activities such as the smoker in September. I look forward to seeing you at upcoming club events.

I should also commend the Student Branch if the IEEE on their excellent initiatives. Through their cooperation, we are able to keep the Design Centre open in the evenings for many of you to work on your projects. Last year’s Professional Awareness Conference was a resounding success, and I look forward to this year’s event.

Best wishes to all.
First, on behalf of the entire Department and my recently-retired predecessor, Professor J.W. Smith, I congratulate the Class of 97. Whatever goals you decide to pursue, we are confident that the knowledge and skills you have gained as undergraduates in this Department will serve you well in the challenging times ahead. You, as Chemical Engineers, will be the all-rounders of the engineering profession. Building on your broad background of chemistry, physics, and mathematics, you will be capable of adapting to the rapid changes which now occur in society. Although most of you may physically be leaving the Wallberg Building, you are still part of the Department. Please visit us from time to time and—if you can find a ticket—plan to attend the Annual Dinner or some other departmental function. To those of you remaining in the undergraduate program, I wish you continuing success in your studies. You are distinguished by belonging to one of the top ranked chemical engineering departments in North America. This year the new collaborative environmental engineering option commenced, and currently two-thirds of our second-year students have selected it. This reflects the increased emphasis which is being placed on the environment by the chemical engineering profession. Strength in biomedical engineering continues to grow, with almost 25% of our Faculty being involved in this area of activity. Our Pulp and Paper Research Centre continues to gain international recognition under the leadership of Professor Doug Reeve. Our students continue to benefit from the size of the Department, which allows them to experience topics which are peripheral to the main stream of chemical engineering. It is in these new areas that job opportunities will continue to grow.

Finally, I would like to thank the elected representatives of the Chem Club who have organized and provided a multitude of activities for our students in the Department over the past year. A strong Chem Club contributes to the overall well-being of the Department and its students.

To our students graduating this year, I give a special word of commendation. You have not only completed a very demanding course of study involving lectures, laboratories, industrial projects, plant visits and research, you have achieved this in the midst of a climate of change within our Department. During the past four years there have been changes in curriculum, in subject matter of courses and even changes in teaching methods. New doors of opportunity have opened up for enhanced interaction with industry aimed at increasing the engineering design component of materials processing. Change is never easy. It absorbs energy, it can cause tension and it often breeds fear, friction, frustration and uncertainty. Nevertheless, if a department or an individual is to improve performance, explore unmarked pathways and develop new strengths, change is not an elective to select or discard, it is in fact a mandatory requirement. The front cover of our strategic plan for the Department carries the motto: “The quest for quality in an age of change”. Change is a fact of life and it can be exciting and fulfilling. With your undergraduate career complete you are entering a world which is characterized not only by change, but by change which is occurring at an ever-increasing rate. As your professional engineering career develops, you will very likely be involved in the process of change. On these occasions you will find that there can be strong sentiments to hold on to the way things were done in the past. While this may make change more difficult and prevent or at least delay the attainment of new goals, it is not necessarily always wrong. In this context, we do well to consider the wisdom in the words of an elderly Salvation Army lady who used to regularly pray: “Help me to forget those things I ought not to remember and to remember those things I must not forget”. Change is a prerequisite for progress. Do not be afraid of it. Do not be dismayed or discouraged by it. Grasp the opportunities presented by the process of change to gain new knowledge and understanding and experience. In the end you will be a better person, not only for yourself, but also for all with whom you are associated in the years that lie ahead. Be assured that you are well equipped to meet the engineering challenges of the next century. Class of 97, your professors salute you and wish you success in your new careers.
On behalf of the Department of Civil Engineering, I offer congratulations to the Class of 97.

As you move into the next phase of your careers, I would encourage you to recognize your strengths and to build upon them.

It is often easy to take for granted one's talents and opportunities. The fact that you were admitted to and graduated from the University of Toronto demonstrates that you are exceptional and have intellectual talents in the top few percent of society. You also live in a society with relative peace and abundance and one that offers many opportunities such as your attendance at this University.

During your course of study, you have developed relationships with equally talented fellow students from numerous cultural backgrounds, the experience of which no doubt has and will continue to further enrich your lives. This experience will serve you well in your professional undertakings in an ever increasing global economy.

You are about to graduate from a program which will provide you a platform in science, technology and professional practice. You have developed skills in analysis and problem solving which will serve you well, not only in engineering, but also in your other life pursuits. Your successful completion of this program further demonstrates your motivation and industry.

Taken together, these are tremendous strengths of which you should be justly proud. Use them wisely and continue to develop and build upon them. Go out into the world with confidence and optimism, welcome the opportunities arising from challenge, and make your mark on the world. We wish you every success in doing so.

This has been an exciting year for Geological and Mineral Engineering. The mining and petroleum industries continue to boom, both at home and abroad, so jobs are plentiful. Your broad training in engineering applied to the Earth, and particularly the insights that you have been given by your Adjunct Professors, have prepared you well for your future challenges. It is now up to you graduates to make the best of these.

And things are going to get better! Philanthropist and mining magnate, Pierre Lassonde, has donated $5 million to transform our current program into The Lassonde Program in Geological and Mining Engineering, ("The Lassonde Mining Program"). His exceedingly generous gift has been the stimulus for others in the mining industry to provide additional moneys for endowed Chairs, scholarships and bursaries. As part of this changeover, our program has moved from the Galbraith Building, which had been our home since the mid 1970's, to the historic Mining Building where it all began. Our new space is in need of renovation and funds are being solicited for this purpose. In the meantime, you graduates were among the first to use the new Common Room and adjacent Computer Facility. This outpouring of financial help is a consequence of the farsightedness of certain individuals in the mining industry who were concerned about who would replace them on retirement. Toronto is the mining capital of the world with more head offices of mining companies than any other city and about $4 billion in mine finance passing through the Toronto Stock Exchange each year. It is only fitting that we also have the best educational facility. In making his gift to the University of Toronto, Mr. Lassonde explained:

"We, more than anybody else, should never forget that the most important natural resource of our country is not nickel or gold or diamonds, but its people."

As usual, the number graduating is small but you are a talented group. You have traditionally contributed to the well-being of our Faculty in a proportion that exceeds expectations relative to your numbers. You are also generous and over the past few years have participated 100% in the graduating GRADitude Pledge.

Geological and Mineral Engineering students are on the forefront of Canada's resource and environmental industries. Marg Crook who has been your constant supporter; Associate Chair Bob McAndrew, who has guided your academic activities; Assistant Professor Glenn Brown, who over the years has been your unofficial advisor and became the new Associate Chair on January 1; our Adjunct Professors Gord Agar, Derek Bullock, Margarete Kalin, George Kent, Doug McLean, Charles Pitcher and Larry Smith, who have brought you their real world experiences; and I, as Chair of your Division, offer you our sincerest congratulations. As you go forward with confidence, pride and cherished memories, we hope that you will keep in touch.
First, congratulations to the graduating class. You are completing a strong and demanding program. You have faced many hurdles and cleared them successfully. I am sure that occasionally you wondered whether professors take special delight in loading you with assignments and laboratory preparations. On top of that, they seem to have a penchant for holding too many tests and quizzes. Of course, all they hope to accomplish is to give you a superior education that will help you make an impact as engineers. There may be a better way to achieve this goal, and when we find it we will use it in Engineering Science.

I finally got to know well a sizable group of students. I had the pleasure of introducing the second-year class to the wonderful world of digital systems. The response was great, despite a few ruffled feathers. Playing with PALs and Gizmo boards surely must spark curiosity and interest in the dominant technology of our time!

We tried hard to spread the word about the uniqueness of the Engineering Science program and the quality of education it provides. This and other proactive efforts have attracted an unusually large number of outstanding students. We are very pleased to have a large first-year class. This is a significant step forward and bodes well for our Options in 1998.

It is great to see many of you participating in non-academic activities. You are the proof that it is possible to combine academic excellence with other successful endeavours. Such involvement is a stepping-stone to a rewarding career. Keep it up and encourage others to join you.
fearless frosh leaders
Orientation

*n.* A joyous occasion that occurs once a year where all celebrate the spirit of Skule™ and harmony reigns throughout the world.
First things first. I would like to personally thank all 600 plus F!rosh who took part in the Orientation activities. However, since that would take an awful long time, you’ll all have to settle for the following. “This sentence is dedicated to (PLEASE PRINT YOUR NAME HERE IN THE SAME FONT AS THE TEXT), to express our most heartfelt thanks on behalf of the O'T0 Orientation Committee, for actively taking part in the events that we worked so hard to plan.” To the F!rosh who decided that Orientation was not for them, or were not able to make it for other reasons, lets just say you missed a good time (especially at F!rosh Nite!!), ask your fellow F!rosh for details. Here’s a very short list of some of the things that happened: F!rosh come; meet at CON Hall; do silly games to make them feel stupid, I mean get them to meet each other; campus tour; food; arm dying, or in some cases, body dying; F!rosh picture; BFC marathon relay to SAC (SUX) and back; Metro Police escort to and from wet T-shirt con…. I mean water fight; free food; SUDS; EPT/TPT; mystery bus/car trips to other universities for no apparent reason; F!rosh Olym-
pics; the profitable (yeah right Dan and Steve !) F!ROSH NITE; Bright Flying Colored yellow concrete hard hats all around campus; and the unforgettable, hence it was memorable, scavenger hunt, whoops, I mean Fact Finding. Oh no, looks like my 250 word limit has been reached, so I end by letting you in on a little secret about Lucy and Binh, thr eyw ge bckuhe bjkcj ukf'c em natsw. (It’s a code, see if you can crack it, it’s quite simple and quite good!)
Frash - n. Scared and dumb. First-year student. That's you. Now you know why they're in there. See above.
class of oto makes a big splash at city hall!
Unlike the outrageous orientation rituals Skule™ is known for, it is also known for its involvement in the community. This year’s charity events included: the Adopt-A-Highway program, where the mighty Skule™ cleaned up Highway 27; a trip to the Boys and Girls Club, where murals were painted (once the frolsh figured out which end of the brush to use, the paintings were completed with blinding efficiency); and finally, a trip to the Daily Bread Food Bank.
FRESH NEW SURROUNDINGS
F!rosh

n. 1. Minions who are subservient to all upper years 2. Bright, innocent and uncorrupted brain power that still has the energy to be optimistic about the future.
2nd Year Student

n. 1. f'rosh no more 2. One who still has no clue of what pulling their hair out feels like.
Hey man, help me out. I got my hat caught in this darn thing!
3rd Year Student

n. 1. One who has survived two years of Skule™ and still sees no end in sight 2. The most desolate of the four years.
Grads

Graduate

n. One who has succeeded through all the torturous tests of human capabilities and has learned the hardest lesson of life: It Sucks!

<td>A wise man once said, &quot;To live happily, learn to ignore all the little shit life throws your way.&quot; He added, &quot;Remember it is ALL little shit!&quot; After 4+1 years here, I agree! And now, I have no need for speed.</td>
</tr>
<tr>
<td>Beaudoin, Germain</td>
<td>&quot;Never let school get in the way of your education.&quot; Thanks to all those who made my 4+P years at SkuleTM bearable and, at times, even enjoyable: WW, SS, BW, FK, AK, AL, ML, JE, MB, DH, Carpenters Club 976, and all the others who I didn't have room to mention.</td>
</tr>
<tr>
<td>Diptee, Jason</td>
<td>&quot;Engineering—an exceptional experience! Certainly superb to learn under some of the finest minds in Canada. To study the engineering philosophy is to become a new being: people, the world—the universe—appear in a shade that was before unknown.&quot;</td>
</tr>
<tr>
<td>Gonsko, Meredith</td>
<td>I would like to thank my parents, Gienda &amp; the smoking chokers club (MM, RK, DS, AL) Memories that will endure: Martha, where's your skirt? Druxy's lunches. A special thanks to Yoav “You're simply the best.”</td>
</tr>
<tr>
<td>Lindsay, Tanya M.</td>
<td>Thanks to DV for the gummies JL for having gray hair, AP for getting married AL for not marrying... yet, GT for being louder (it's a banana!), and WT you are dead! Stu, I couldn't have done this without you— together forever.</td>
</tr>
<tr>
<td>Mancuso, Connie</td>
<td>To the Class of 977: thanks for the good times, the friendships and memories that I'll cherish forever. To CM, SR, BS, SS, SV, AN, SQ, GA and everybody else who brightened my day, I love you all. I'm sure you will all be very successful engineers and may all your dreams come true! God bless!!!</td>
</tr>
<tr>
<td>Pershad, Rinku</td>
<td>I am grateful to all the chemical species, in particular my parents, SK and VG who participated and helped the kinetics of my success reach its first steady-state, the famous iron-ring and B A Sc degree. A special shout-out goes to the chem 977 catalysts (Sim, Con, Jag, Jas, and Dave) who made my reaction pathway at Skule an easy &amp; memorable one!</td>
</tr>
<tr>
<td>Qazim, Smeena A.</td>
<td>The lamb has survived! No more frantically copying problem sets, only to be asked, &quot;Chart—Tech Consulting How do you always manage to get a copy so quickly, with so little effort?&quot; If I've learned anything here, it's practice, practice, practice!</td>
</tr>
<tr>
<td>Qureshi, Kanwal</td>
<td>Well it's over and in some sick way I'm kind of sad. I won't miss all the sleepless nights but I'll miss all the great friends I made—LOVE U GUYS! And a big thanks to my family, and most of all to God!</td>
</tr>
<tr>
<td>Saneinejad, Samar</td>
<td>Although I came pretty close to insanity on numerous occasions in the last 4 years, I managed to pull through with the help of some exceptional friends Thanks guys, for making engineering less painful. Good luck to all the Grads!</td>
</tr>
<tr>
<td>Saunders, Erin</td>
<td>Good luck to my friends at the back, right of class. Thanks to my PD group, my frosh, B-C, Euge, and that damn spider on butt. Maybe now I won't be called Casper. Thank God one Steve is graduating!</td>
</tr>
<tr>
<td>Thibodeau, Jillana Paige</td>
<td>Motivation The Iron Ring Dawna, Norm, Jodi, Cary The '94 LUESS exec Charij, Tech Consulting S.T.T. Sheila Dream Come True It's Finally Over</td>
</tr>
<tr>
<td>Simangan, Oliver</td>
<td>Thank God it's over. I could lead a reasonable life now.</td>
</tr>
<tr>
<td>Sreha, Sabina</td>
<td>To survive engineering: learn how to cross College, without getting hurt -live through hours of thermo/lab/dynamics -spend hours in JES (that's for you Soma) To all the great girls in ChemEng, especially Sona, Sama, Ananda, Connie, and Swarni, (Peter and Evan too!), you've been great, good luck, and goodbye Engineering!</td>
</tr>

Imagine life without Adrian

Mok, Janice
Thans 2 all who made these 4
years worthwhile, esp thanx to
my family and BB. Too many
memories that cannot be said
in this small space, but I'll
carry them with me always.
Good luck to all of you

Cassim, David
Now that it's finally over, I
just want to say thanks for the
memories. Orientation, killer
exams, Civ dinners,
all-nighters, and of course,
Survey Camp!
Good luck to everyone in the
future!

Fu, Ai-Chen Pheobe
Roads we traveled, knowledge
we gained, laughs we shared,
stress we conquered, goals we
accomplished, and friendships
we built.
are all the memories I'll cherish
Thank you all for the great 4
years!
Mwalwanda, Christopher
The greatest people in the world were known to take the road least travelled. Now that we’re Civ’s, we can build our own. Good luck everyone, make it a good one i.e. by-pass survey camp!

Oved, Vered
We did it! I want to thank PK, M&D, TO, UO, AO, G&G, DS, JL, CC, K&M, JK, ZG, and BR&B for the great memories and your never-ending support. Dixie, it wouldn’t have been the same w/o you. Paul, I Luv U, “you are my sunshine”... through good & bad, you always make me smile.

Rice, David
Good times were had at New College Powell House, SUDS, Fresh Nights, the Brunny and Student Hall, in South Padre, with the BRP and Queens Kegs, Skule Nite’s and Fonts! Good luck to all my fellow 9T6+1 and 917 grads!

Seucharan, Dixie
Thanks (VO-UO-JL-CC) for the wacky memories. Skule wouldn’t be the same without you. VO, thank a million for being there. AM, for lack of a better word, I love you. I wish you all the very best in life. Congrats.

Terzievski, Danail Turbo
YEA - HOOOOOO!
I think I did it in 4!
To the people (and TIT’s) who made it a party and adventure!!!
I LOVE YOUUU!!! And to all the BITCHES - HAVE ANOTHER DONUT, BOYS!!!
Hear the CANNON’S MIGHTY ROAR!!!
SKULE RULES FOREVER!!!

Wong, Michael

Lidstone, Charles
Answers are a prison for oneself.
Just to prove that I have typed
it exactly how I want it I will do
it again.
Answers are a prison for oneself.

Mehta, Tejas Pravin
Eng. Sci. was uh... HELLO!! Elic options
get the shortest end of the stick while
those crummy Aero get their 2nd
year marks multiplied by twenty million
and they still don't have 100.

If you want incredible,
god-calibre marks,
choose Aero or MSE.
If you want a job,
choose ELEC.

Nagy, Andrea
"Lewis'' C. was right. "It takes
all the running you can do, to
keep in the same place. If you
want to get somewhere else,
you must run at least twice as
fast as that!"

Thanks Tor, Buffee, PJ, AM, and
old iron ringers BA, Jo-oh and
Neil, for the sympathy and
amusement.

Pau, Herbert
Que sera, sera.

Pruden, Trevor
In school, we get up, go to
school, eat, study, go to bed.
In work, we get up, go to work,
and watch TV, go to bed.
Now, what the hell is that?
Time to make some money!

Tan, David
I still can't solve Diffy Q!!!
Special thanks to Bourgeois,
Katza, TT, Samier, Cooperd,
Moreno, KC and the countless
people that have made
my N/P years memorable.
Best wishes to the tag team Shafty
and Arny.

Vainberg, Vlad
begin quote:

Good luck to us all

Chan, Anthony H.-C.
To me 4 years in Engineering has been the toughest yet the greatest lecture ever. Not only have I learned to understand my strengths and weaknesses through successes and failures, I have also gained visions of my future. Though we are about to leave this greatest Engineering School for the real world, let's not forget the bag of marbles that we all share as we move onward in our lives.

Chan, Howard Wai Ho
Finally, IT'S OVER!!! Remember the hours (or days) we spent in GE251!! Crazy last-minute cramming. every moment will be cherished (or hated. well, that's what makes our university life special after all)! Special thanks to all my dear friends and profs. (yeah.)

Chan, Yi Chang
4 Years, huh? I feel like I just got in yesterday, and I have to go now? No!!! Anyway, thanks for all who helped me in these 4 years and God bless you!!

Chau, Nellie
"Don't be afraid of tomorrow - the Lord is already there."

Colohan, Chris
This page is intentionally left blank.

Comitale, Leo
"Danno," said Vroomfondel in an awed whisper, "I think our brains must be too highly trimmed. Majkhise -" So saying, they turned in their heels and walked out of the door, and into a lifestyle beyond their wildest dreams.

Francisco, Paulo
"Tested and certified to endure extreme amounts of stress" Thanks to all those who believed in me, especially mom, dad, sis, and Lenche.  
Regards,  
Paulo

Ha, Vinh Hung
"If the facts don't fit the theory, change the facts."  
- Albert Einstein
That's what engineering is all about. Thanks to those who made it real!

Fazlollahi, Hooman
They're out to get me.  
They won't catch me.  
They won't break me.

Iwasa, Peter William
Screwdriver Man salutes: Vanier 69, the "family," Xspace, Speedbump, the Aug. 17 crew, Whiskey Saigon, Molson Ultra, John Player Special, psycho chicks, WinNT, "busproof" and Niagara Falls.

Kerjikian, Emma
"If your ship doesn't come in, swim out to it."  
- Jonathan Winters

Kerjikian, Tamar
"What we know is a drop. What we don't know is an ocean."  
- Issac Newton

Chan, Ging-Ging
9yrs ago, we sang about walking through a storm with our heads held high. 4yrs ago, I faced the eye of the storm and trudged right into it. Now, as the clouds thin, I reminisce at the wonderful times I've had, playing in the puddles. Thanks for the company - I never walked alone.

Hong, Wayne
What can I say? I am just glad to finish. Thanks to all of U who helped me along the way & God Bless.

Good day, tomorrow we sail.

3yrs, 4yrs, 5yrs, 6yrs ..
Gravel pit to Ivy League.
For some, maybe.

H.-C. Chang, Aug. 26, 1995
Kivenko, Bram
I came not knowing, and I leave
knowing why I do not know.
There is one thing that I did
learn, however, and it is that this
place is a heck of a lot easier
when you show up.

Lacavera, Catherine Caroline
Sleepless nights and long hours
in crowded, fragrant labs.
Memories of cooking up labs,
Forcing chemistry, hating MECH
and hailing Clark Hall. I'm
blood-shot, frazzled graying and
weary. And these have been
the best years of my life.

Li, Hai Zhi
Life is a short journey in which
so many things are to be
accomplished. Keep your mind
healthy and open, and you will
be prepared for any new
challenges.

Pan, Qiqiung
"There are only two ways to live
your life. One is as though
nothing is a miracle. The other
is as though everything is a
miracle."
—Einstein

Rogov, Idan
#define ENCOD "disarray"
#include "engug.def"
#include "pey.h"
#include "avscmp.h"
#include <stdio.h>
long main()
    
    MixCement(YS64+PEY)
    Tex(EQ, PK, KE, NS, AR, FR, CT, CT),
    E.BITT; F.KONRAD,
    MOM, DAD, TOM, RO;
    return(FREEDOM);

Kronenberg, Alon
"Anything not worth doing is
worth not doing well. Think
about it."
—Elias Schwartz

Lacavera, Anthony
THE EMPEROR'S WILL:
MY FRIENDS,
VICTORY IS UPON US.
THANKS TO THE HAND,
LORD BLADER, THE
ADMIRAL, JABBY,
WETWIFE, EPM, BROTHER,
AND ALL OTHERS WHO
HAVE GIVEN THEIR SOLES
TO THE EMPIRE.

Lam-Hang, Benedict
Woohah!!!
Well the years in computer
engineering have been a virtual
experience! I want to thank all
the little bugs and friends that
made my study amusing and
helped me out when I was on the
point of operator overload.

Lam, Ivy N.W.
Finally, 4 years is over. I will
never forget writing programs in
GB251 overnight, having dozens
of tests and labs due in a week,
and all the unforgettable
memories you all gave me.
Good luck and farewell 917!!

Markandu, Jeganathan
"Whatever I have to say I'll say
next year!!!"

Ngo, Vigen
"Ska! The exhilaration of success,
the agony of failure, the
dizzying rush, the quiet release,
the stress, the coffee. The
smiling faces of people who call
themselves my friends. who
struggled along side me, who
cared."

Pandovska, Lenche
"The greatest gift is not found in
a store or under a tree, but in the
hearts of true friends." I'd like
to thanks my parents and sisters
for all their support. Thank you
Paul, for always being there.

Patel, Jignesh
Special thanks to all my friends
and my family. Here are some
tips: find a smart lab-partner who
knows what is going on, cheat
without being caught and don't
over-study if it's not reflecting
your marks. Now it's over for
me, like to say one thing, SUFFER!!

Robar, Jason
So many cliches, so little time.
After 4 years of riding the bell
curve, I leave with a degree and
ring to say that I survived. Go
hardcore or go home! Devo
Rules!

Sebastian, Sam J.
They tried to teach me useless
theory, but they failed. Still, it
was a very exciting experience.
I could not have survived without the support of
my family and friends, near and
afar.
See you out there on the NET!
Hailing frequencies closed.
Shaikh, Saeed
Finally, it's all over! Zeshan, thanks for the "goods". Special thanks to my wife Kudsiyyah for being patient. Looking forward to a new life, new baby and new company. Look out for "innovations" - we may need to hire you!

Tariq, Zishan
They've come to snuff the rooster - yeah, but he ain't gonna die.

Vasilakos, John
"Stick a fork in me. I'm done"

Wysynski, James
"Whatcha gonna do with yourself / Boy better make up your mind / Whatcha gonna do with yourself boy / You're running out of time / This time I got it all figured out / All I know is that I don't know nothing / And that's fine" - OPERATION IVY

Yuen, Tommy
I would like to thank the professors, the tutorial assistants and the students. All of you have taught me a great deal of things about school and about life. Thanks!

"In the love poetry of every age, the woman longs for the weight of the man's body. The heavier the burden, the closer our lives come to earth, the more real and truthful they become."
- Milan Kundera

Brener, Aron
"Imagination is more important than knowledge."
- Albert Einstein

Camardha, Michael G.
Thanks to family and good friends who were always there, through good times and bad. My four years at Engineering have taught me more than I could have ever imagined, and that does not even include the academics.

Chan, Albert
Thanks to my family and friends for everything

Chan, Chor Kwong
Four years of university life is like a big dinner dish, served to you with different tastes. You might hate some tastes, but it certainly serves you well! :) Special thanks to H.C.K.T.L.V.H.A.L.P.E.L.
Without you, this dinner wouldn't be so tasty.

Chan, Nancy
Life in Elec. Eng. has never been easy, but still I managed to complete all those challenges. Thank you friends who made these four years so easy for me to pass by, and remember: you owe me big time.

Cheng, Frankie Wing Kei
Let's create a brilliant future together!
Be wise

Cheng, Yung-Li
I never thought I could be an alumni of U of T so fast. Special thanks to my 5 best friends. You know who you are! Best wishes to you guys and see you later!

Ching, Henry Chi Ho
Many thanks to the people whom I studied with, my lab partners, people who were total strangers before I came here and now friends. If either of us are lucky, we shouldn't be seeing one another next year. Take care, friends

Chiu, Michael Douglas
We cannot do anything if we begin by saying we cannot do it.
- Elpidio Quirino

Yawnzah! After 4 years of f_ing, p_ing, and non-stop c_ing, it's all over! ERTW!
- MDC

Chong, Tsui-Shan Claudia
Just want to say thanks to all of you who have been hanging around with me these four years. "For Those Who Reach Touch Their Dreams!" ☺ Smile along your way!!

Chow, Garrick
After graduation, Fourier transform may stay with me for another few weeks. differential equations, may be another few months; but memories of the good times and friends will stay with me forever.

Cooney, John Aidan
"Prithhe my dear, why are we here? Nobody knows, we go to sleep As breathing flows, my mind secedes I bleed."
- the Pixies

Costantielo, Giovanni
Thanks to everyone who made my degree possible. Good luck to everyone and may the Force be with you
ELEC 9T7

Hui, Terry W.T.
In these four years, I have got three most important things in my life
1) a new nickname: "Old Man"
2) a girlfriend -o
3) FRIENDSHIP!!! ☺
Thank you Mom & Dad and all of my friends, for helping me get through these four tough years. Thank you very much!!!
Jiang, Kenny Kunlun
Four years passed. Checking my overused memory, Hmm, spicy fries. St. George Chicken. Yaak, what kind of junk have I been eating? To all the boys/girls I've known here, you guys are part of me now. Thanx a lot!

Keung, Yuen Wai
Time waits for no man. All I can catch is memories with U all: those hard time and happy time, those exam and mid-term period, I have you besides me. Hope that time and place is not an obstacle to our friendship. FELLOWS, SEIZE THE DAY!

Lee, Ying-Chung
"Thanks, Mom and dad, for your support during these four years!!"  
"Many thanks to Victor, Banana, SCLau, Nancy, Maggie, Goldfish, SeaDog and all my best friends. Without you gys, I wouldn't have gone this far!!"

Lui, Justin Chi Chwen
4 years of university, just like that. Seems like I just got my arm dipped purple yesterday. Thank you, to those who made the good times even more enjoyable, and those who pulled me through the bad ones. C.K., S.C., M.H., I.L., J.C., K.C., T.L., D.C. KEEP IN TOUCH!!

Lam, Alexis Chun Bong
Sincere thanx to Maggie, Edwin, Claudia, Nancy, Jason, William, the Fisher & Powell members and all my friends who help to create fond memories and who support me throughout these 4 years.

Leung, Simon S.
Submerged in the high pressure environment of for four years. I'll finally breathe some easy air. Sure! I may not be ready for the world, nor may the world be ready for me. But . . Prof's and friends, thank you all

Liang, Andy
Say "Thanks" to my classmates. Say "Sorry" to those who were hurt by my actions or words. Say "Stay on the side of God, so that He will stand on your side." to myself

Lau, Teresa Mei-Kwan
Within past 4 yrs, whether of those memor with all my fellows, or those experience for midterms and tight course schedule, is unforgettable. Special thanks to my family & friends for the support! & congratulation to all 9T7 grads.

Maligeorgos, James P.
Best wishes to Wael, Hovig, Emily, Bart, Tony, Gianni, all the jokers in ECE/9T7, everyone in Revolia, and especially to Ellen

Micallef, Raymond John
Skule has a wonderful way of teaching us theory and methodology that only overpaid researchers can use. I found that there were only a select few professors that were connected to the real world. It's Been A Time!

Rajah, Shenthan
What can I say? This may not be the end yet

Sorkin, Joshua Gustavo
The blade of the sword doesn't stretch the arm of the one who ignores the virtues. Thank you family, for backing me up every inch of the way.

Tsang, Chi Man Donna
"Be a friend to thyself, and others will befriend thee." - Scottish proverb
These 4 yrs are memorable. Thanks to all my friends & family for supporting me all along. Good luck to all in the future!!
Viana, William C.
Thanks to everyone who helped me through the rough times, and to the ones who were there to enjoy the good times.
It was a blast!
All the best to the Class of 917.

Well, I could say that the years I spent here in SKULE™ have been the happiest years of my life. I could, but I'd be lying (a little). Thanks to everyone who made it more bearable. You know who you are.

Bahrami, Kamran
I always believed "knowledge led to power" — I still do. To my close friends (you know who you are), I have only one thing to say. Thanks for the great "drive"...you were great companions!

Basso, Adriano T.
Thanks to everyone who helped me get THE RING.

Chang, Ezra T.J.
"I've studied now - Kinematics - Fluids and Solid Mechanics - And even alas! - Dynamics - From end to end with labour keen: And here, poor fool! With all my lore I stand no wiser than before." - Johann Wolfgang von Goethe (1749-1832)

Ettorre, Jason
I've never looked at this day arriving it has. Since this 4+1 year trip has been so exciting and intense. I hope the hereafter is as incredible.

Hsu, Grace C.W.
I WOULD LIKE TO THANK THOSE PEOPLE WHO GAVE ME A GOOD TIME, THEY MADE ME HAPPY. I ALSO WANTED TO THANK THOSE PEOPLE WHO GAVE ME A ROUGH TIME, THEY MADE ME STRONGER. ENJOY YOUR LIFE!

Hung, Peter P. S.
First of all thanks to whom supported me through these years of engineering struggle. I shall remember the sensational environment we shared. Finally with my gratitude, wish all my college discovered the brightest spot of their life.

Itsou, Nick
I entered these halls with awe. Not knowing the trials I would face. There is often pain, and seldom glory. As we struggle with the loads we bear. For some it is only a game, and for others, life's work. I shall not fear to bend my knee to help those in need. But I'll not stoop to the level of the petty. For after all the strife and struggles, In the end I've found, that I am a better man.

Leung, Amy Pui-Nei
Thanks to JimmyC, KevinY, FrederickL, KenZ, AaronC, DanielK, FreshB, MEC97. Without your constant help and support, I wouldn't make it this far. Special mega thanks to Chris, who's always there in my rainy days, especially when my dentist's not around.

Do What Thou Wilt Shall be the Whole of the Law! Sit! Batacan’s unexcelled complete awakening

Arbesman, Jennifer
Good times, great friends, serious parties, clubbing it, drinking some more; passing out... Long live the IND class of 97T. Thanks you clowns for making the years fun and bearable. Time to wake up, it’s over.

Arman, Ethel
Do you know where you’re going? It’s an open-ended question. And I’m not the one with the answers. But I do know that the journey is an end in itself. And the road is as important as the destination. So, keep going, and don’t be afraid of the未知اضية。

Cerit, Errol
ALRIGHT, HOW ARE YOU? I will now sing a song for my classmates and all the giddygaddies. “Oh green alligators lochneegese humpty backed camels chimpanzees, cats, rats and elephants you may see but you’re never going to see unicorn”.

Chang, Chiew
At the end of engineering school life I am glad I will get out of here. Thanks for everything. However I don’t like the feeling of struggling through the years. It’s time for change now. I.E.R.T.W.

Cheng, Karen
Five years at a Catholic all-girls high school, four years at UT Eng... how much punishment can a girl take in one lifetime?!!! Thanks to family, friends, “Trubbs”, moccacinos and intense therapy, I am living testimony arttis can survive here!!!

Coutinho, Alvin
So much for 2 weeks of Eng (Fruit Loops) Sci! 4 years of perfecting the INDY motto Slacking, Petitioning, Copying n Ignoring BUT, Surrrly we are verry powerful people! 2 the groovy nerds n turds, Gracias!

Darawish, Issam
Here we are now, entertain us, a mosquito, a libido my respect to the bunch outside Sandford Fleming

Khayat, Rasha
What can I tell you my brothers and sisters... I’m glad that you stood in my way. Lots of love to the family, Aldo (my spark), Isabello, Alessio, Fred, Sharon, NickyJ, & Indys. Much respect for commonroom, CSILtrips & all that’s Zen.

Kwok, Wendy Wai-Yee
Even tho’ it’s been told, it’s so hard to say goodbye. Thanks for all the laughs &memories, esp to gri’F ‘97T, &of course “the family”. Here’s to potlucks, blading, beach v-ball, MI, apple cider, & chilling @JD’s Take care... I’ll miss U-guys!

Liu, Eric T.
I want to express my appreciation to the following people who helped me to conquer these four “INTERESTING” years: my parents, Cathy, my dog “Hunter”, Second Cup’s Irish Cream, and especially, my dearest friends. Thank you all for everything!!!

Mak, Chris
“The night is my companion, and solitude my guide. Would I spend forever here and not be satisfied?” -Sarah McLachlan

Ngai, Belinda
4yrs/PLE is finally over. Mom, bro&sis I made it!!! Thanks MB, Kathy, Debbie & Kar-Ho, Wyle & Vivian for their endless support. Best Wishes to the class of 97T&1. See you guys in the real world! At last time stays, we go...

Papagni, Michael
It’s been five years of hell, but I did it my way baby. Special thanks for your support: my love Paula, parents, brother, sisters, and the guys Alvin and Dave A.K.A. Kramer and Metro. Signing off, your little buddy.
Rattner, Sergio
"What do you say to end the best four years of your life? I must say that my family and friends have made my life. To my parents, you are the best, and I love you very much. David, from Mr. Murphy to Makas—WE DID IT! And everyone else, we had some wicked memories didn't we? MEMORIES "I Believe! You are #1—VA" JAPAN
Tak. ACS, Kenore, PEY club, CSIE Trip 97, YOSH. LET'S GO OUT AND MAKE IT HAPPEN!"

Rostenne, Raphael E.
My university years showed me how much I still have to learn, and unlearn. Is there room for idealism in a jaded world? I love you Rachel. I just can't resist... "are you bus proof?"

Tran, Chi
To all those all made my four years here easier and more memorable, million thanks. KP, MP, BC and VT, life won't be the same without you guys.

Torenlviet, Gerard L.
"The heart has its reasons which the reason does not know."
- Blaise Pascal, Thoughts

Wolowiec, David
Ladies and Gentlemen, I thank you for your patience and attentiveness. Now go! Be free! Assume your place in that grand theater we call life. Be true to yourselves and take care.

Tsang, Stanley
(Effect on brain after four years as an engineer) Gotta fill up 31 more spaces. Think, think, think, think, think. Oh, half way there. Now to write down anything for part-marks. Oh wait... DOH!! I meant GREAT year, bye!

Wan, Lilia
Four years went by so quickly with so many memories. Thanks a lot to everyone who made it happen. Thank you guys for being there for me always. You know who you are. TAKE CARE!! We shall meet again.

Zaveri, Nahid
Five years of living life to the most. Surviving probation, Froshkit chair, running for IE chair, winning election, 3 job offers, leaving position, PEY, Loblaw offering job, thesis broke all rules. I'd do it all over again. Thanks Raj Mehti!!!

Zupancic, Roland
Thanks to the people who have made the last four years the best ever. Special thanks to my family, the Kids in the Common Room (Aldo, Rasha, Sharan, Al, Fred, Abad, Errol...), Mistah Kurtz, and J. Alfred Prufrock. Good Luck!

Ha! Ha! Ha! Four years of copying labs and problem sets from what’s his name there, you know the guy to the right of this picture.

Problem sets aren’t as tasty as they use to be.

Like Dude, it’s fourth year, time for me to catch the big one (surf).
Sports

n. Activities where sweat pours out of the body and heavy breathing is heard as one physically exerts oneself to achieve fulfillment.
President’s Report

It has been an awesome year for athletics here at Skule™. Teams battled valiantly throughout the season and managed to dominate a number of sports. Congratulations go out to Matt Czarnota’s Rugby team and Mike Stevenson & Marco Petretta’s Div 2 Hockey team for bringin’ home the gold. We can also raise a toast to Olga Kosarewich’s women’s Basketball team, and Paul-John Ungod’s Div 2 rugby team, for demolishing the competition and coming in a close second. Andy Tsai did a great job leading two Co-Ed volleyball teams to top three standings.

In addition, we can commend our Div 1 hockey team for stompin’ heads in the Guelph tourney and showing them who rules the ice!

I am confident that my awards list does not stop here as we still have an undefeated Div 1 men’s hockey team, and a promising women’s team. On top of this, we have a killer waterpolo squad just beginning, and a whole slew of athletes just waiting to pound the other colleges in up coming matches.

Tournament play will soon lead us to ESSCO Olympics, where we will be defending our championship title. This year Queens will be hosting this spectacular event, and we plan on cleaning up with our unstoppable group of highly trained athletes. On a similar note, we will be displaying our athletic prowess at UofO (zero) in their annual volleyball tourney.

Great thanks goes out to my executives: Matt, Russell, Cathy, Joel, Duncan, Alex, Aryn and the commissioners for doing a great job this year! Good luck to all the future Skule™ athletes and executives.
...WE WERE DANCING ON THE TABLES IN THE ARBOR ROOM AND WE ALMOST GOT ARRESTED but who really cares because we were celebrating the first ENGINEERING MULOCK CUP CHAMPIONSHIP in four years.

An unbelievable performance of strength, athleticism and alcoholism was demonstrated by this incredible team who went undefeated in their nine game season. A total of 5 points were given up in our first 5 games including 4 shut-outs (19,15,12 and 21 points to nothing), an incredible 5-5 tie against those chumps from the Faculty of Law Old Boys, and a rather disappointing 26-12 victory over Innis. (Disappointing because it ruined our points against average.)

The playoffs saw this first place team of donut-eaters man handle Scarborough for the second time, the incredible sextuple-overtime default victory over Law and the energy lacking triple overtime championship victory over Erindale, the Division 2 champs. What a year it was!

Special thanks goes out to all who played including the solid front row of Turbo, Jesus, Rossdapropr, Danforth Dave and Pint-Size Picton with his great line out calls, “The ball is going to Fred...” The great Back row of Rookie, Boom-Boom Beserve, Westergaard, and T. Can’t forget those Locks Tommi and Eli. (Note: Eli was not fully naked in the arbor room, he had shoes on.) Those terrific backs including Al Bundy, Russ, Gord “my thumb hurts”, Cemal, Patrick “I’ll tackle anything moving”, Sepand with his boot, Keg, Howie and PJ both faster than speeding bullets, Joel in his Golf/Rugby kit and Roman “I really am not permanently drunk”.

Thanks for a great season and I can hardly wait to defend our title next year.

Matt “Al Bundy” Czarnota "N^49T8

1996 marked the beginning of the second season of the ENGINEERING DIVISION 2 RUGBY team. A surprising performance was put forward by these donut-eating wannabe’s as they clearly outshined the performance of the first ever division 2 team of a year ago. Well, to be completely honest, they couldn’t have been any worse!

With the whole team sported their brand spanking new jerseys they set out for Erindale for the season opener. During the season opener, I noticed something vastly different from the year before—these guys knew how to play (well, some of them did!). A well-played game by this group of cannon fodder resulted in a heart-bending defeat (not exactly a heart-breaker!). But the baby boys in blue did not get discouraged. They came back in similar style as the big boys of Div 1 Rugby to completely humiliate and annihilate those pansy’s from SMC by a convincing 36-0 tally. I really can’t remember how the rest of the season went but I can tell you that this team fought valiantly to make it to the Div 2 Championship where they lost the Rubbermatch to Erindale on their turf.

Thanks goes out to Paul John for running this team and to the leadership and great performances by Oliver, Ghass, Robbie, Travis, Pete and David Hum and some very impressive new-comers to the sport who know who they are (I hope they do because I certainly don’t, just kidding).

The whole team did everyone proud while wearing the mighty Blue and Gold colours of Engineering Rugby. With many graduating Div 1 players, its nice to know that there are always competent players to fill in when required.

Thanks Guys.

Matt “Al Bundy” Czarnota "N^49T8

1. Men's Rugby Div 1

2. Men's Rugby Div 2
The hockey lads kept pace with the Rugby Champs by having a very special Fall season.

The A and B teams combined for 12 wins, 3 ties, and NO defeats. Fifteen Fantastic Fall games and not a Loss in sight—the best record in recent memory, possibly the best record ever!

Skule ’B’ won the Div 2 Championship at Christmas; Pasting PHE, Lambasting Law, and Scuttling Scarborough en route to a momentous victory. Greg Kelk was superb in goal stopping all penalty shots in a thrilling semifinal win over the Maple Laws and posting a final game shut out again Scarborough’s purple peril. The line of Mike Rogers, Marco Petretta and Rich Gray were courageous, skillful and productive. Adrien “the flying anglophone” Deveau notched the penalty shot winner vs. Law. Alex “I can sleep anywhere” Paradi entertained the crowd, his teammates and the hoarse coach. Darren Solman and Gary Stefanoz were stalwarts on ‘D’ with Gary even scoring the “Stanley Tankard” winning goal. Congrats to all who played. It was truly a Team Championship!

Engineering ‘A’ Hockey Fall record: 6 wins and 1 tie. A great 1st half in a very competitive league. As many points as all of last season!

Super-recruit Vojtech “let’s go for a beer” Kucera (former Czech Jr. and CIAU All Star) led the team and anchored the defense with Stan “let’s shoot for the moon” Derango. Up front Steve Aquino arrived with a big shot and Provincial ‘A’ experience. Excellent young goalie Andy Unger was between the pipes-every game! What a concept, a goalie with skill and dedication. Similar qualities were shown by Sam “the face off man” Lee (1 pair of skates/career will do) and Jason “UC me score” Gaudette. Time to go drinking—with the Woodsworth Lads and Ray “the pub-closing dad” Westcott. Will the Fabulous Fall lead to a Superb Spring? Que sera sera! Good luck to one and all in your future efforts on and off the ice!

‘Da Coach’ Mike Stevenson
After coming off a disappointing quarter final loss to Medicine last year, the 96/97 co-commissioners of Andy Pena and Jason C. Lin were determined to help bring the team to glory and mold the team into a force to be reckoned with.

Mid-September, with classes just on their way, the evening try-outs at Hart House brought out 30+ candidates. Throughout the try-outs, there was promise in the potential recruits and when the final selections were made, excitement and optimism was high. Unfortunately, only after 4 games, the SKULE™ team sported a meager record of 2 wins and 2 losses, losing teeth-clenchers to Victoria College and Erindale. We needed to regroup.

After several practices, the next thing you knew, the improved defense, good setting and powerful hitting helped the SKULE™ team reel off 4 straight wins with one coming against last year’s champions, University College. We were back in flight.

Mid-January, returning from some dearly needed R&R brings many questions to ponder but none more crucial than whether or not the SKULE™ team will be able to regain its form after stuffing themselves in the face during the holidays. (i.e. will they be able to translate the 2” horizontal gain to a 2” vertical gain?)

The final four games will be a good test and skill indicator for SKULE™ as they will face Medicine in their first game back and have a rematch with University College and Scarborough Campus at the end of the season, both formidable opponents who eagerly await the chance to even this season’s series.

Although the future has yet to be written, overall results have been very good and with more practice and hard work, we only hope to get better as a team. Adding to that our hunger, all of our intentions lead past the quarter-finals and on to Div 1 volleyball victory. 1, 2, 3, SKULE™!!

Andy Pena CHEM 9T9
Jason C. Lin IND 9T7 + PEY

Well, after a stunning first week win (by default), the Men’s Div 2 team struggled to a mediocre 3-4 record, barely missing the playoffs. It seems that no one on the team could muster more than 2 good serves in a row. We plan to blow next years budget consulting with ‘peak performance’ expert Tony Robbins. Or we could try to improve on the number of practices scheduled (0). Goals for next year include finding someone else who can set the ball. Both Son and Enzo are leaving for greener pastures (jobs, grad skule, ???), so we need to locate some other short people with good hands. Swiss F!ROSH import Christophe Kupferle proved to be the best rookie on the team, astounding us all with his massive kills. Div 1 should get in touch with this guy, because he’s the hardest hitter this side of Joe (Tank) McNamara. Best vertical (and hang time) goes to Chris Mwalwanda. The ‘Most Resourceful’ award goes to Leighton James, for successfully attending every game, even though I was sending game reminders to some Mech Eng. Prof. (jamesl@ecf) instead of Leighton (jamesl@ecf). MVP goes to Son Cam, who’s setting skills will be sorely missed next year.

Jack Cooney ELEC 9T6 + PEY
This year’s team rapidly developed into a force to be reckoned with. This may have been due to the brand new practice balls acquired over the summer, but was most likely attributable to the collection of talent that came out. The team has a winning record for the first time in three years, and the playoffs await. Many thanks to all who contributed to a great year.

J.R. Strain MECH 9T8

High flying dunks, no look passes, pressure defence and killer fast breaks. No, but seriously, it being our first year together, we found that we had difficulties working together as a unit. Some of our early season failures can be attributed mostly to lack of offence and defence. Fortunately, after some gruelling practices and luck we were able to put on a winning streak (so far the streak is at one game at time of printing). Hopefully we can continue on our winning ways, make the playoffs and make a run for the championship! Our competition has been pretty tough but maybe by next year we will be more experienced and will be able to compete.

Zoher Bhujwalla IND 9T7 + PEY
for Howard Jung N'9T9 (Team Captain)
1996 can best be described as a "rebuilding and restructuring" year for the Men's Outdoor Soccer team. Along with the experienced intramural players who returned, half of the Division 1 team this year was composed of rookies who all played well and put in a great effort.

For the Div 1 team, the season started well with a 1-0 win over the Grads.

However, the league was very competitive this year and the team was unfortunately undermanned during key games. They just missed qualifying for the playoffs in a heartbreaking 1-0 loss against Meds in the final game of the season.

The Division 2 team had a more successful year, finishing the season with 4 wins and 2 losses. They advanced to the semifinals, but were defeated.

Over all, both teams played well (when everyone managed to show up) and we are looking forward to the next season.

Tom Martinicchio

This year the Co-Ed Basketball team was poised to take on the great challenges of intramural basketball... without ever practicing! Ok, so we were there not only to play ball but also to have a great time. And a great time we had! What merriment existed... well sort of. In actuality, the team performed quite well for a band of overloaded engineering students. At times the score was not an indication of the level of spirit that all the team members put into the game.

Hey, I know we had a great time and that is what matters...we needed to let off some steam and we did a pretty good job at it while winning some games, too!

This year's Co-Ed team was a great team of people! We hope to continue to better ourselves in the coming years! (and pass exams, too!)

Kamran Bahrami MECH 9T6 + PEY
INCREDIBLE! An astounding number of people signed up to play this year that we came close to entering an unheard of three teams in the league! Thirty-five people made up the two team Engineering contingent intent on holding on to the championship trophy for yet another year. Four members of last year’s ‘B’ team moved up to the ‘A’ team while twelve rookies joined the ‘B’ team ranks.

Aiming towards the playoffs, every player set their sights on improving their game, playing hard, and drowning every single opponent who dared to think of trying to take the ball away from them. (Oh, the gall of them!). With the exception of a final second, heart-breaking loss to PHE in the season opener, Eng ‘A’ went on to slaughter every other team in their path on the way to the playoffs. The 19 person ‘B’ team (12 of whom had never played before) took only four games to win their first one, beating a talented UC team 4-1.

The ‘A’ team played hard and fought well all season with the championship trophy in mind, while the ‘B’ team continued to improve exponentially with each game trying for one of those four playoff spots. It was as I said before, incredible.

Congratulations on a great season.

Hope to see you all come out next year.

Jordan Shapiro N49T9
Once again, many students signed up to play volleyball this year. Unfortunately, only a handful were selected to represent Skule™.

Those who did play for Skule™ demonstrated the will and the intensity seen in engineering teams of the past. The enjoyment for the sport shown by each player was also a key ingredient to the success of all the engineering teams.

All three teams played well all season long and their hard work earned each of them a berth in the play-offs.

Unfortunately, in the first round of the play-offs, two of the engineering teams had to square off against each other and only one could continue to the next round.

Engineering ‘A’

Engineering made it as far as the semi-finals, beating Phys. Ed. along the way.

It’s been a great season. Hope to see you all next year.

Stanis Yu  ENV CHEM9T9

Engineering ‘B’
Women’s Soccer

After a bit of a slow start our team consisting of: Andrea B., Andrea H., Aryn P., Cathy C., Heather V., Heba C., Marisca V., Olga K., and Renceta K. placed second in the Division. Next season we hope to improve the performance.

Thanks to all the players.

Olga Kosarewich GEO 9T8

Women’s Basketball

Women’s Volleyball

This year’s women’s volleyball team continued the Skule™ tradition of volleyball excellence. Despite a slow start, we powered our way to another successful season. We wowed the opposition with mighty serves and spikes, denied attacks with huge blocks and digs, and most importantly made more noise and had the most fun. Who would think that these same athletes were brilliant differential calculus/structural mechanics/computer programming/quantum physics wizards by day?

Thank to all the players: Simone, Ida, Jen, Lisa, Nazia, Jessica, Andrea, Cathy, Olga, Aryn, Helen and Oy. Good luck to next year’s team!

Cathy Cheung
The Women's Engineering/Grad Ice Hockey Team, better known as "Grad Skule™", experienced much success this season. We won lots of great games and lost a few hard-fought battles along the way. We played like a team and we partied like a team. We endured 7 a.m. Tuesday games and tolerated 9 p.m. Saturday games. We even had a game at 8 p.m. on Valentine's Day to really test our devotion to the team. We had riotous practices at various outdoor rinks. We had the LGMB rooting us on and annoying the hell out of our opposition during the finals. We had a rep as the toughest team in the league. Can't understand why! We only sent one Erindale goalie to the hospital on a stretcher and that was an accident. We had very devoted coaches. Grad Skule™ players were full of heart! We grew as a team and learned many important lessons about hockey. The legend lives on...

Helen Vlastakis MECH 9T8

We won one, we lost some!!!
If you win by spirit we would have slaughtered the whole bunch.
It was a great year and we had lots of fun.
By the end of the season we were finally getting the hang of it.
Too bad it was the last game. We won by two nothing.
JUST WAIT UNTIL NEXT YEAR!!!

The team voted

Thanks to Amanda, Cathy, Gina, Andrea, Aryn, and Marisca for showing up. Sorry about Ph. Ed. participation... We will team up with others next year. Hope to see you then.

Marisca Vanderkamp GEO 9T9
A cold, snowy winter’s morning in Guelph late Jan ’97: overcast skies, cloudy heads. “I should have stayed in bed pillow wrapped around my head instead of waking up to find playing contact hockey in my mind.”

8 a.m.: Days Inn continental breakfast. “Keep the swearing down boys.” Exactly what is the optimal amount of caffeine, wondered the lads, hoping the black liquid would restore movement to their still lifeless limbs. Max, recently returned from Costa Rica, assured us 3 cups and a couple of donuts will do the job.

9 a.m.: On the ice, warm ups, just being there an achievement. “Remind me how much I love hockey,” mused Adrien. They have warm up drills; we have Vojtech Kucera (tournament MVP)! First hit, first goal, first win 3-0 over Ryerson. Mike scores on his first shift—a very good omen!

1 p.m.: The Carlton Cretins provided the opposition. Should they actually be at school? Carlton entrance standards: a buck and a heartbeat? One fellow ditched his helmet in search of a fight revealing a really ugly halloween mask (or were his parents lowland gorillas?). No matter, they should have stayed home in their kennels. The raven resistance was erased 7-0. Stan “you can hit me but you can’t knock me down” Derango and Mark Ponick were solid on D. Will “the thrill” Stratton provided scoring punch.

Friday night: Many ‘bevys’ consumed “just to replace fluids”. The Days Inn allow us to stay “in spite of last night!” Greg “the rookie” Spangler arrives from Toronto. Ryan “the physical force” Desouza stays on “in case anyone tries to take Mike’s head off!”

Sat. semifinal: Will to Jason Ponick to Ryan. Goal of the tournament at 10:15 a.m. after too little rest and not nearly enough physiotherapy. The ice bags were out, wounds were licked—“hopefully they feel just as bad.” Guelph were gracious hosts allowing Toronto a 9-0 tune up for the Final. Will apologized to the fans for not reaching double digits. Three goals for a single shift for Sean Clearys line: a definite highlight. Two hours off lying around, sore as a chariot race loser, wishing for a Geisha girl, the time flew by. 1 p.m.: The Final! A really close clean game. A late penalty caused some worry but ultimately Adrien Deveau had scored the winner 2-1 over a reinforced Ryerson squad. 5 games, 5 wins, 26 goals for 2 against. We were Champions!

A great job by one and all from U of T!

Mike Stevenson
Clockwise from top left: Mud-pie wrestling, limbo contest, dart contest, jello-eating contest, and we don’t want to know what these people were doing in the guy’s washroom!, and Vince: “I’m too old to be doing this anyway, so take the goddamn picture”.

[Images of various people in different activities and situations]
It was my pleasure to Co-Chair Skule Daze 9T6 - where 200 highschool students across Ontario gathered to share the spirit of Engineering @ U of T. The students were engaged in a design competition, tours, seminars, social activities, athletic activities, and even a picnic in Queen's Park. They were able to experience the residence life and atmosphere of our campus. The event was a great success and we dazzled the Pre-F‘rosh with all of the facilities and opportunities that Skule provides. It is a great annual event that promotes Skule, so do get involved in helping out! See you next year!

Always running somewhere!
Engineering Society

n. A band of misfits who prowl the hallowed halls of Skule, guarding the sacred spirit of Skule.
I have spent the last four years working hard to improve the Engineering Society. In the past year we have made great progress! The Executive has worked very hard, and has achieved an incredible amount. What changes took place? The big ones are a new web page, publication of professor evaluations, an oral communication course, a new chocolate bar machine, increased awareness of the Engineering Student Society Council of Ontario (ESSCO), cafeteria renovations, food at SUDS and an Orientation Review committee. So what does this mean? A more professional Engineering Student Society which is doing more to accommodate more students!

My goals for the year were to raise the profile of the Engineering Society and improve school spirit. We have definitely succeeded in raising our profile with other professional organizations, and I am confident that the future Executive will continue this trend. School spirit is a hard thing to tackle and rears its head every year. It is not something you can change within one year, but a seed which when planted deep can grow strong. Sorry, that sounds cheezy but it’s true. I’ve also learned that we may be trying to define spirit in the wrong light. Maybe students need something other than spirit to carry them through their education. I wish the future Executive much patience, understanding and luck in their quest to raise Skule™ spirit.

This year has been a great year! Thank you to Lucy, Binh, Drago, Savio and Julie. Thanks to the whole Executive, class reps and a wicked Cannon staff. We spent many long meetings together and you all did a great job. And thanks to all the students who participated in events and supported our Skule™! It’s been swell!

Boss Lady
Franny
Dayton, Ohio where U of T Engineering was vigorously promoted.

ESSCO (Engineering Student Societies Council of Ontario) has had a progressive year. With its president from U of T, they have been actively meeting with the Ontario Government in regards to tuition cuts on behalf of engineering students across the province. Five delegates (and three “crashers”) also had the opportunity to attend the Canadian Congress of Engineering Students (CCES) in Sherbrooke, Quebec where we discussed what engineering students expect from an engineering degree. A member from the Canadian Council of Professional Engineers (CCPE) was present at our discussion sessions, and will present our ideas and suggestions to this organization. It should also be noted that U of T is hosting the CCES in 1999! We won the bid for this conference, and we will show engineering students across the country that we can hold a professional and informative conference!

Next year, I regret to say that I am not going to be as directly involved in the U of T Engineering Society. I have been elected to the VP Ontario position for the Canadian Federation of Engineering Students (CFES). It will be an exciting year for me, ensuring that engineering students are promoted to students and professional organizations nationwide!

Hats off to the Engineering Society this year. We are moving in a very positive direction—where everyone will be able to get involved in different events that we organize.

A special thanks to Tanya Lindsay for helping me make the smooth transition into this position and for giving awesome advice, to Thadd Nettleton for doing an amazing job organizing the Ontario Engineering Competition promotion, and to the Officers (Puff, Sav, and especially Binnie and Frances—YOU GALS, LUCY’S SLEEPING HABITS WILL LIVE ON!!!)

Thanks

LUCY PEGORARO INDY 9T8

P.S. INDY’S RULE!

P.P.S. Don’t be sharp, don’t be flat, be natural—I had to say something to the musicians!

P.P.P.S. GO MAD (GO Make A Difference!)
Well another year has gone in Skule™ which has seen many follies and capers go by. The great thing about Skule™ is that as the years go by, the spirit here gets better and better. Since I have been here, every Frosh year tries to out-do the previous year, but little do they compare with the Class of 9T8.

All the finances went well this year, no real problems that myself and Julie (GOD) couldn’t handle. The levy fund money distribution went well with the new procedure of the club chairs approving the purchase of new equipment.

Here are a few words of wisdom from the years past: Einstein’s wings are the best. It’s not safe in the Eng Sci common room. Vince has ebola. They shouldn’t leave the Toike layout lying around before printing. Candles are a lot easier to light if they are broken in half. The rigid tool cannot be chained up anymore. Hi, I’m Bruce, he’s Big John. I hear Waterloo singing about it, but I still want to see their 2 L’s. Using pairs of cell phones in different cities are charged long distance rates. Photocopier codes should not be programmed in sequential order. Gavin still doesn’t have his Carmina Burana CD; it has been 17 months. Mice don’t like powdered donuts, it leaves fingerprints. Watch your fingers when lowering the Indy Chariot into a trench, let alone the window. Only ten people are allowed on the roof at one time. Zoom ads are student-proof. Zoom ads are brought to you by the same people who created the Snapple machines where you can watch the bottle drop. Neil is a shifty individual. Only go fishing when it is in season. While talking about Marriot—their food still sucks. Drywall is ok, taping is ok, tiling is ok, but sanding blows.

And most importantly—Mario’s Bakery—We deliver.

Its been a great year, keep the spirit alive. If you ever need help or some advice how to get involved, just ask for me—Puff.
Two years ago, I tried to buy the other guy. Okay, okay, so I was acclaimed, big deal, what does that mean anyway? Maybe everyone was scared to run against me, yeah that’s it, yeah (please excuse the previous statements, they were just confidence builders). On the serious side: A kid and his father are walking in the park when they come upon two dogs having sex. The kid asks his dad what is going on, so the dad replies “they’re trying to make a puppy, son.” That night the kid walks in on his parents making love, and asks his dad what’s going on. So the dad explains “Your mother and I are trying to make a baby brother or sister for you.” So the kid replies, “Okay dad, can you turn mom over, I’d rather have a puppy.”

On a more serious tone, this year was a pretty good year in terms of activities that took place, and that was largely due to the work of people other than myself, such as B&G Steve, F!rosh Steve (CIV 9T9), F!rosh Steve II (CIV 0T0), 16 and under only Dan, PEY Steve, Andy Sunsomething, Skule™ Nite Trevor, Thadd with 2 t’s, Jen with pink eye, stress queen Nadine, Drago the accountant, rugby Matt, sunrayce Kevin, loud Julie Garvin, Jeremy-cut my eye open-Wohleber, Sally de Havalind, Anjan-neatest notes in MEK 9T8, Ching Yearbook Yi, Paul and Ryan or was it Ryan and Paul—what’s the difference?, bedsheet painter Heather, Gregg saved my ass Donn, Brian where are you, Jovan-as disruptive as I am-King, HHF Ajay, balloon maniac Carlo, Warren-sick on the big day-Wong, Diana posters Ferrari, and last but not least Bashar Al-help Carlo-Kuwaiti. Thanks to you all. If not for your help and involvement, events such as: Orientation, Oktoberfest, Homecoming, Godiva Week, Cannonball, F!rosh Nite and F!rosh Nite II, would not have been the successes that they were.
Vice President: Internal • EFCR

Ruberto who got me into this mess! I jumped into Eng. Soc. with both feet not knowing any of its history (goods and bads) and looking back, I have no regrets about doing my best to make changes where needed and to highlight the already successful events that are offered.

From house keeping of the office and organizing meetings (Yep, I take minutes and order food and much more) to representing U of T at a National Engineering Conference and making sure communications are all in order, I have gotten a few gray hairs and the occasional ulcer. Some changes this year: ECF is available to post Eng. Soc. events (thanks to Prof. Gorrie), the sign in the atrium is up to date, attendance to Executive and Full Council Meetings is better than ever, Engineering Society has a new home on the web and we’ve invested to make our place at Skule™ more suitable for you with renovations in the atrium and the office.

So what have I learned? Firstly, my time management skills are the largest improvement—6-8 hours a week for Eng. Soc., my hardest year, work and lots of PLAY! Secondly, I’ve learned the hardest part of being a leader—how to listen, how to relate to others and how to discuss issues (both understanding a different point of view and expressing my own). And finally, I’ve learned to love and respect a great deal of individuals that I’ve met through Eng. Soc. I’m thankful that I got involved in Eng. Soc., a path that merged with the paths of many of the most talented, bright, caring and enthusiastic people in the student body. See you next year!

First of all, I’d like to thank the faculty representatives for helping out this year and playing such an active role at Faculty Council meetings! This was a very productive year with an emphasis on improving instruction. With the help of the faculty representatives, we published the very first engineering teaching evaluations this year. Furthermore, we offered two free Oral Communications Courses that students could take to improve their presentation and interview skills. I am hoping that these changes will have a permanent place in future Engineering Societies.

Overall, this was a very informative and enjoyable year for me in this position. I would like to especially thank Franny Jewett for having such exceptional insight, fresh ideas and for guiding me this year. I wish everyone a fantastic summer and I hope to see you next year!
As my ninth year in Eng Soc draws to a close... Ninth! Did I just count nine years in this mad house/zoo? I really must be crazy. But as they say, it takes one to know one! The year has been hectic to say the least, but lots of positive things have happened, spearheaded by our fearless leader Franny. Communications with class reps have improved and more people seem to be getting involved in all aspects of the Engineering Society. Franny has been truly instrumental in changing Eng Soc for the better, with those around her committed to her vision.

The office continues to be a veritable tub of activity as individuals and groups try to maintain that fine balance between too much academia and not enough extracurricular activity, or is it the other way about? There is never a shortage of things to do: retrieving my wandering chair from EngCom, equipment to fix—yes, the photocopier does require power to work, and rooms to book—thanks for the short notice!

**Julie Wilkinson**

Highlights of my year include running out of almost everything at Orientation, TRB in D.C., Godiva Week (thanks, Steve, for a job well done!), SUDS cash?, Cannonball (what a blast!), Reading Week (wouldn’t you like to know!), Skule™ Nite (Trev & crew—a big round of applause), Gradball; in fact, the total atmosphere of “let’s get things accomplished” has made this year quite “breathless” with non-stop action! I could not have made it through without Bogdan and our Second Cup Coffee breaks. Thank you Bogdan, for helping me stay sane and sober!

Working with Franny, Lucy, Drago, Savio, Binh and everyone else who has had anything to do with Eng Soc has been a great pleasure this year; your patience while I try to mix work and study is deeply appreciated. I shall be sorry to see the year over, but as Omar Khayyam once wrote: “the moving finger writes; and, having writ, moves on;...”.

It remains for me to wish the best of the best to those graduating, and see you next year to those returning. To each, I add a very special “Thanks for the memories!”, I hope yours are as good as mine.
GRADitude 9T7 • Blue & Gold Committee

Class of 9T7, we have an opportunity that no other graduating class has ever had or will ever have. With the money pledged to GRADitude this year, we have an opportunity to turn each ONE dollar donated to student assistance into THREE. Officially this is called the "Seat Sale for Student Aid" because with our help, the university will be able to provide extra seats at the academic table for the price of one. Through this "3-for-1" arrangement, every dollar donated to Skule™ for student assistance is being matched by the Government of Ontario and by the University. The goal is to create an endowed fund for scholarships, bursaries, and fellowships, where the scholarships are named after our own class—the Class of 9T7 GRADitude Scholarships.

Let us all invest in the education of the students who will come after us. After all, we would not be enjoying many of the computer facilities and lab equipment if the engineers before us did not invest in us. With our 100% participation, we can show Skule™ that the class of 9T7 rules!

I would like to thank in advance the graduating class of 9T7 for their generous contribution to the GRADitude campaign. Best of luck in all your endeavors in the great beyond. The possibilities are endless out there, so go and get 'em...

Isabel Bayrakdarian
GRADitude 9T7 Co-Chair

Steve Dennis CIV 9T8

I have done many things, but I have never been the chair of such a committee as the Blue & Gold Committee. Really, what we do baffles me sometimes, we encourage each discipline to fight to the bitter end on a battle field (Chariot Race on Front Campus), we ask our finest males to "strut their stuff" (the annual Mr. Blue & Gold Pageant), we throw baseballs at targets which, if successful, will dunk our prized members of Eng. Soc. into water (the Dunk Tank at the end of Godiva Week).

Asking ourselves why we do this, some may be content by answering it builds spirit and some may argue it's traditional. But at the end of the day, FUN WAS HAD BY ALL! Consequently spirit was raised and further tradition was carried on.

So to answer your question, "Why do we have a Blue and Gold Committee?" I have no idea, but it would be missed if we didn't. Imagine, no movie nights, no Homecoming Parade, no Godiva Week; people would start to think we were a commuter Skule™ with no spirit and WE CAN NEVER LET THAT HAPPEN!

My sincere thank you to those that not only helped, but made things happen. Heather with brush in hand, Paul with laptop on lap, Ryan with Heather nearby, Joe with hammer in hand, Mario and da' boyz with a sword in da stone, Chief Attillator and Guard with cold brass and a boom concluding their visits, and the LGMB for the musical interludes. Thank you to Neil, Dan P., the other Dan, Jacob, Alex P., Jen, Christen, Pam, First-Year Chair Steve A., F!rosh Steve R. (sorry Rouatt), Peter K., Michael H. and to the rest of the committee (that's where all you F!rosh fit into the picture). Puff, your subtle advice always had value, thank you. And finally Julie (GOD), who always had time when I most needed it, I can't thank you enough.

In lack of a better conclusion, THANKS FOR COMING OUT!
If there is anything in this book you should read, READ THIS! Were the two co-executive Sac reps. SAC does suc (not really, but I’ve been physically coerced by large men in black overalls to say it does), but believe it or not, SAC does provide many benefits to all undergraduate students. These benefits include a fabulous health plan (80% of your drug costs are covered, only the legal ones though), exceptional office services (faxing, photocopying, and laser printing), a hype lounge (sort of, they have a big T.V. and a phone), and the opportunity to meet people whose greatest achievements have nothing to do with alcohol (a.k.a. people other than engineering students).

Part of SAC’S mission this year was to promote the best undergraduate experience ever, and maximize involvement in extra-curricular activities. We must say that this year especially, SAC has gone the extra mile in trying to achieve this goal. Such activities like the Cross-pollination event and the Big Sugar concert at the Hangar are only tips of the iceberg. SAC also represented U of T in huge political issues, such as the protest in the cuts to education and the big memorial event for the fourteen engineering women who died in the Montreal Massacre.

In addition to the services that SAC provides for the undergraduate community at U of T, SAC showed their incredible spirit in supporting various engineering initiatives including the Blue Sky project by donating $2500!!! Now, is SAC great or what?!!

Although we are the co-exec SAC reps, there are two other SAC representatives for engineering: Ken Gower and Felix Tang. Congratulations guys, you did a hell of a job this year. Well that’s it for SAC. If you feel the urge to bug us about anything to do with SAC, don’t hesitate to stop us, or visit the office (the painted dome place).
EngCom was good this year. The Toike was really good. The Cannon was really good. The Skule™ Book was really good. So was the darkroom. And some of the games, but some weren’t, and most of the people were, but some also weren’t. And special thanks to Colin Knowles for all the help and for taming the computers.

But the highlight of the year was getting into the Detroit Auto Show for free and on a press day when the public and riff-raff couldn’t go. Here is the letter that got us in:

I am writing on behalf of the Engineering Communications Committee at the University of Toronto. I am inquiring about the possibility of attending the Detroit Auto Show in January on one of the designated press days.

Last year’s Auto Show was a marvelous spectacle of new automobiles and innovative technology. There promises to be more of the same this year; unfortunately many of our students will be unable to make the four hour trip to Detroit, depriving them of the opportunity to visit this great exhibition of technology in an industry relevant to many of us in Engineering. Sadly, the Toronto auto show held in February is little more than a large showroom, unappealing to those of us who crave more than parking lot full of salespeople and shiny cars. [*sniff*]

This year, I would like to send staff to cover the event for two of our publications: The Cannon and the Blue Sky Newsletter [well, it could happen]. The Cannon is the Engineering Society’s newspaper relating events and information relevant to engineering students at the University of Toronto. We plan to cover the latest technological advances in the automotive industry, including engine modifications, chassis, material developments, and any other. New cars and concept vehicles will also be featured.

The Blue Sky Newsletter is a publication dedicated to our solar electric vehicle program, the Blue Sky Project. The idea to bring this project to our school was first conceived last year in Detroit. In the newsletter, we plan to write about the student projects present at the show, as well as developments in alternate fuels, engines, and other environmental innovations. [*oooh, aahh*]

The articles we are planning will appeal to students from many engineering fields such as mechanical, electrical, environmental, and materials, as well as to the scores of automotive enthusiasts. I hope to send one journalist and one photographer from each publication...[it’s in the bag at this point]

Four of us went and enjoyed the show. Thank you, EngCom. And, this proves that if you set your mind to it, it usually takes too much effort, but sometimes it is often worth it.
Well, it was another great year for the Toike, as we embarked on our great quest to make milk squirt out of people's orifices! One the bright side, we featured many jokes about llamas. We got to do some really funky graphics (in part thanks to our fabulous new computers--talk about yer quality merchandise), there were absolutely no controversies (hmm... it's only the middle of the year... we're going to have to fix that) and we actually had some advertisements. And, for the second year in a row, there was NO INTERNET CRAP! (Wild applause!)

A special Toike-er-riffic thanks to:

Christian Bosio
Chris Luginbuhl
Rob Brown

and all our contributors, contest enterers, contest winners, Dob Bole, and everyone who incessantly asked, “when’s the Toike coming out?” And remember, if squirrel jokes are outlawed, only outlaws will have squirrel jokes.

-Colin Knowles MEK 9T8,
Toike Editor, 95-96 MEK 9T8
The End Beginning

For almost twenty years, The Cannon follows a legacy of reporting on Skule™ News, posting student opinions, and informing the engineering body of upcoming events. This year has been no different. With a new look, a fresh new staff, and a modern approach, we have continued the tradition of keeping the members of Skule™ up-to-date on the issues that concern them both as engineers and as students in general.

Not to be forgotten will be the bold cover stories, the insightful editorials, the record breaking Poll results, and the always informative club reports. Inspiring memories include Karen’s invaluable assistance, Teresa’s enigmatic pieces, the Stanland comics, Gina’s flair for words, Julian and Vincent’s tireless layout effort, and of course, the Editor’s reluctance to finish his editorial on time.

The Cannon can now step out from the shadow of the Toike; it has its own place in Engineering. The year has gone by so quickly and yet it feels like we’ve just begun. Best of luck to future editors. As for me, it’s been fun.

Albert Lee
Cannon Editor 1996-1997
COMP 9T9
So I’m back in EngCom the day after a deadline writing an article that has to do with the handbook. Story of my life. But at least it’s done! Since my cohort Tara is not available at the moment, I’ve taken it upon myself to thank all the major players, especially Karen and Carole for their theme, Paul who spent almost as much time in EngCom as I did, all those artists, Arnold for his cover, and everyone who ate KFC during our one major layout meeting. Tons of fun, but I think I’ve had my fill of editing publications for now. Running all over downtown Toronto...TWICE! Oy. Too many late nights (You know what I mean Paul). Blatant filler. Faculty woes. But it was all worth the satisfaction of seeing the finished product, I swear!

From the DARKROOM... I’d like to give many thanks to all who helped out... but especially to Margaret, Neeraj, Carlton, Chris and of course my head troll Jacob. The place was finally renovated this year... something that was quite long overdue (it’s now a dark blue and purple instead of a yucky light brown). To my fellow Skule™mates, all I can say is come out next year and take part. It’s a good way to keep your mind off the work and in the end leaves you with a real sense of accomplishment.
Lady Godiva Memorial Band

Mike Paiero  MECH 9T7+P  Bnad Leedur

As I sat here (being at work) writing this really late write-up (it's not my fault, really, I didn't hear about it until the week it was due!) I'm thinking what I should write about. Well, obviously the LGMB, since this is the LGMB write-up, but it's my chance to rant and rave... and drool a bit. (Leading you idiots takes its toll. And PEY an' Cora's make ya stupid!) I looked at what some other leaders wrote, and you know, a lot of it still applies. I thought maybe I'll scream about how boring and unspirted some people are, and how it's infesting life and the Bnad. It's been a coupla years since a Leedur's done that, and how the Bnad can drive Leedurs so mental they should be wearing straight jackets, yet be considered perfectly sane. Or howabout how tough it is to have fun nowadays. Seems having any fun is itself politically incorrect and will get you thrown out of wherever you are (except jail, too bad!). But all I'm gonna say about those other things is that Skule is what you make of it! Marks don't count for everything (considering I got a pretty decent PEY job, marks don't actually count for ANYTHING, except getting your degree) and your time at Skule is the best time to 'LGMB all you can Be' (to paraphrase the US Army) and just let loose and have fun. I'm not really in the mood to rant about that, so I'll babble about the good events we had this year that were out of the ordinary spectrum for the Bnad.

We joined the Jesse & Gene Way Street renaming on Q-107 (live! heard by millions, well, hundreds) and the Bnad won 107 bucks! Well, that's what I told the Bnad. After all, when there's a check for $1007 in my name, there's some kind of handling fee, isn't there? ) And rumor has it that someone heard an LGMB tune on the air a week or two after that. We're still waiting for our royally cheque.

We were INVITED BACK for a United Way Telethon (again, seen by Billions!) and those who went got cool LGMB T-shirts free!

We haven't done this until after I write this up, but the LGMB was OFFICIALLY invited to participate in the entertainment of the 1997 World Special Olympics, in Toronto! Because this is such a big event, I'd like to thank Gavin right now for letting me know about it. And this time, we really will be seen by MILLIONS of people!

The Bnad got TWO pop machines (well, one is mostly juices, but you know).

The first ever LGMB license plate was sold. Ok, it wasn't an event, but it sure pissed Kamran off!

We also had a special Alumni Homecumming. It was decided that this set of Alumni Classes would be the class that the LGMB is honoured at, so there was a larger than average Alumni Bnad, made up of Ex-Leedur and Ex-Drum Majors types.

I'd like to basically finish off by saying thanx to Colin, for leading the Bnad when I wasn't there & Vince, for quitting your job to play drums & Joel, for NOT leading the Bnad astray, as a good ex-Bnad Leedur should & Gavin, for the info & Geo Mikey, for kicking my butt to call Q-107 & Ryan, for only knowing one song and playing it every event (OOPS, I mean Paul) & Ryan, Lisa, Christen, Heather, the regular bunch of idiots at every event & everyone else who came on events at some time or other & Suds & Dean McGrath & Julie & the non-existant creeps, none of whom I've never not seen not unfiling the pop machine & my company, for paying me while I type this up & everyone that I forgot to thank, but should of. Thank you.

Good luck on those exam things, and see you next year!
Ok, if you’ve read this far, you’ve earned the right to read something worth reading:

The history of the band reaches back to Paul LaPrarie in the early 50’s, the LGMB’s creator. His goal was to get a bunch of students together and form the Lady Godiva Memorial Band. A noble undertaking for any promising musician, but what wasn’t known about Paul was that he couldn’t read music, nor could he play all that well. Once this was discovered, he was replaced as leader and demoted (promoted if you ask me) to bass drummer. This made him ironically the band’s first leader, and its first ‘white noise’ member.

Paul showed us that the only thing ever required to do anything is enthusiasm, and the LGMB has grown around that creed. Funny, now that I think of it, Eng Soc has grown around the LGMB.

The LGMB’s contribution to the evolution of the Engineering Society has been so great through the years it cannot be measured on any scale (even logarithmic ones). Eras may pass, leaders may fall, subways may stop, but there will always be the band, serving as the engine of Eng Soc’s spirit. No other Engineering Society in Canada was recognized for its spirit in the Maclean’s 1995 survey, and no other Engineering Society has their own marching band with fifty years of history. You’re an engineer, you do the math.

FIRST WORDS OF THE LEEUR-2-B… Whassat? Leedur ‘O0 BE!?!? You mean I gotta nudder ear of this? NOOOoooo…. But seriously, folks… so this has been a GREAT YEAR for the band… our pop machine population has DOUBLED (we’ll get power for that machine ANY DAY NOW, honestly…) .. we’ve participated in TONS of great events (like the Q107 Morning Show—best marching band in the universe! It’s official!) and NEXT YEAR is going to be EVEN BETTER! With even more GREAT EVENTS, more CAPITAL LETTERS, and the very first ever BNAD COMPACT DISC!

So come out to the next band event… just check the BNAD room door (you can’t miss it, just keep walking after you enter the Eng Soc double doors) and show up in Eng Soc whenever the signs say! You won’t regret it!

To many students the LGMB is the first image of engineering they see, and it reinforces what they suspect about engineers as students: we’re closely bound, we party hard (and efficiently), we’re loud, and we drink like camels (how accurate). But, the LGMB is all of this and more. The LGMB is armed with the fruits of musical technology, and this makes us louder.

On an aside, my highschool english teacher once told me never to start a sentence with the word “but”. But, in a few years I’ll be qualified to sign passports, and she’ll still be taking night courses in an attempt to increase her salary. Ha! I’ll a verbless sentence right here just for the heck of it!
Hello! It’s your humble Skule™ Nite 9T7 producer here. So how was your year? How about those exams? How’s the family? Do you think the Leafs are ever gonna pull their act together? Didn’t Skule™ Nite ROCK this year!!!

You did see Skule™ Nite this year didn’t you? The greatest Musical Comedy Revue on campus? You know, it’s that show that the engineers put on every year. It pokes fun at the simpler things in life, like Hollywood movies, exams, and artsies. Skule™ Nite is a tradition at Skule™ that dates back to the early twenties, and will continue forever. If you did see it this year, you know what I mean when I say we are The Musical Comedy Revue. If you didn’t see it, then you’re either an alien, or from Sudbury.

Which brings me to my third point. Skule™ Nite is fun. More fun than a barrel of sea monkeys! It will be around next year, so if you want to be involved in theatrical history, join Skule™ Nite. We will need acting flunkies, singing flunkies, dancing flunkies, lighting flunkies, set construction flunkies, sound flunkies, prop flunkies, fawn-over-this-year’s-producer flunkies, harass-people-to-buy integral-a-gram flunkies, put-up-poster flunkies, etc. etc. etc. It will be an experience to tell your kids about (when they’re old enough of course).

Thanks to all those who helped out this year. There are far too many to name, but you know who you are. Skule™ Nite is a team effort, and we had one helluva team! Break a leg everyone!

The Skule™ Nite 9T7 Cast
This year was a very exciting year for the PEY Club. Club participation was higher than last year and more ideas were brought to the table. With the growing number of students taking on PEY jobs, there was even more a necessity for the existence of the Club. The Club has the role of liaison between the PEY students (which includes the alumni) and the PEY Office and Faculty. The Club has a seat on the Engineering Society’s Executive Council and can express the concerns of the PEY students when needed. The distribution of information on Eng. Soc. events is also made readily available.

This year the PEY Club in conjunction with the PEY Office, Professional Development and the Vice-Dean’s Office had a variety of events. Some of the more prominent were the Leadership Forums and the PEY Reunion. Both were new events that were targeted to current students and past students, respectively. In addition a new website was created in order to better distribute information to the students out on PEY. The Club also put out some new merchandise in the form of baseball caps. The Club was about new things and new ideas; for this reason, participation was higher. Better relations were fostered between the Club and the PEY Office. Both benefited from this and many new ideas for the future were established.

The PEY Club was a very good experience for us and we would like to thank all the people that participated and helped make the Club something that mattered. We could not have done it without you all out there and we would like to express our sincerest thanks.
It's terribly hard to believe that both of us actually made it through another one of those crazy Skule™ adventures. Hope that when it's all over, we still pass this year (eh Dan?)!

All the hard work paid off, continuing the tradition of success at Skule™.

Dan in particular tried hard to make a great impression on all the pre-F!rosh while Becky was making sure there were lots of folks around to see Dan making the great impression. After all, the role of the High School Liaison Committee is to provide a strong link between high school students and the men and women of Engineering at U of T. We have the terribly easy job of promoting our Faculty as well as the university and reminding pre-F!rosh of the reasons they should look into enrolling in one of the best programs in Canada.

From U of T Day, High School Visits and F!rosh-For-A-Day, to March Break Tours, Skule™ Daze and our new web page, we were able to reach out to more students than in previous years. Attendance was high at many of the events, and we received lots of positive feedback from the students. Dan and I can agree that this success is owed to all the Skule™ men and Skule™ women who showed their spirit and pride for the Blue and Gold. More thanks go to Vera Kan, Colin Knowles, Carole Song, and Gina Seto who have put in some extra time for us. Carole and Gina have been busy getting Skule™ Daze together in record time and we're sure to see an impressive weekend in May.

Both Dan and Becky would like to take a moment to give credit to Deirdre Stanton and Christine Cody from the Faculty Office who every step of the way were going way beyond their job description to help us out. Unfortunately neither Christine nor Deirdre were working with us second semester, but we will welcome back Deirdre from her maternity leave and wish Christine the best of luck in future endeavors.

Have a great summer everyone!!! See you for yet another exciting Skule™ adventure, same bat time, same bat channel.
Well, the time has come once again for a clueless frosh to try and explain exactly what the 1st year chair does. In following the great SKULE™ tradition, I’ll simply copy last year’s! The chair is responsible for representing first years at meetings—lots of meetings. Usually these meetings include pizza, which gives me an opportunity to do something besides talk to myself. The chair also runs the 1st year committee, a group responsible for...

Frosh SUDS, a blast, with Jello-O, karaoke, limbo dancing and blow darts being the highlight of the day. A non-appearance by the totally non-existent BF C to crown the event winners capped a great party. Upon proving that the year of OT0 can throw the best SUDS, we have now set our sights on the famed Chariot Race. Our fearless charioteer Gasz, is determined to lead the class of OT0 to victory! (ya right!)

Frosh Nite 2 is soon approaching, as the 1st year committee attempts to blow even more money on BEverages and entertainment for the young and feeble minds of 1st year. This year’s event will no doubt equal the past disgraces 1st year engineers have caused!

I would like to thank all of those that have helped organize these events, especially Jenn, Rob, Ayesha, Raffy and everyone else who regularly attended our meetings!

The 4th Year Committee has the easiest mandate of all the committees: to celebrate getting through four (or five... or more) years of engineering (hell?). At this point in time, (beginning of 2nd term — 51 DAYS ’TIL IRON RING!) there is not much to report because all two of the committee’s projects are just getting going: GRADBALL & THE IRON RING PARTY. I have no doubts, however, that both will be (were) a success since there’s many terrific people who will help (have helped) make these events happen. I thank all of you!!! A few special thanks: Lucy Pegoraro for her enthusiasm and support, Julie Wilkinson for ALL the help in ALL these years, Damian Murua (my brother) for designing the Gradball posters and invitations, and Stuart Lindsay (my hubby) for not complaining about being “volunteered” to do committee work.

Signing off for the last time...
Tanya M. Lindsay

(I’ll really miss this place...
NOT... maybe)
Whooooah! What a year. Honest we would never have taken the job if we knew how much work it was. This year was supposed to be the beginning of a turn around for Suds, only the year-end budget can tell us if we were successful, but regardless, we gave it one hell of a shot. The introduction of a head DJ, a head bartender, a food bar, shooters and mixed drinks, and an accounting system helped to make our lives hell. Not to mention the collapse of Campus Beverage Services and having the Mariott take over (guys, work on the food first, then get back to us). If it wasn’t for the help of our great staff we would never have survived.

By all those surveyed, 83% said Suds was better this year than ever and loved the changes. The other 17% were passed out.

Memorable moments: Frosh week, Shooter Suds, dropping pumpkins from the third floor, 911, Cross Pollination, Pauljohn naked, Godiva Week.

We would like to thank some people in particular:
• Jacob ‘Geo Guy’ Hanley: For spinning the funky grooves and working above and beyond expectations.
• Aldona ‘Rum bum’ Wiacek: For NEVER drinking while working, and helping out all the time.
• Ein-Stein’s: For being our sponsors all the time and getting us lickored.
• Alex ‘First aid’ Mihailidis: For your crazy microphone stints.
• You know who you are: For providing Suds first chalk outlines.
• Julie ‘God’ Wilkinson: For not freaking on us when we lost money.
• CBS/Mariott: For nothing (if you know

where I ripped this off from—you are WAY too old).
• Nurses et. al.: For providing scenery, oh and drinking. Prince rules.
• All our patrons: For your money—good job.

Alex ‘Yeah, you want me’ Paradi and Joe ‘Strip Search’ McNamara: For making Suds a better place to drink.

It is only January so we have probably missed people who helped later in the year—DEAL WITH IT.

Suds Staff
Well two co-chairs and several peers later, it’s the long awaited Social Committee write up... This year we had a new position added to the Social Committee: the Anti-Social Chair, and she performed admirably.

F'rosh Nite was great. That’s all will ever really say about it officially. Over 500 people, a lot of beer, good music, a fire truck, a cannon, and way... too much pizza (Dan!). Special thanks to all the people who came out to help... and at all the free pizza...

Well, we had the usual events this year Oktoberfest... where everyone had a “great time.” Almost got the spirit trophy this year too. Special Kudos to those four guys from Devo who figured “the bus is leaving NOW...” means they can sit around and have three or four more beers. Oh well; we heard the walk back was fun.

Another popular event this year was Cannonball. Lots of fun and dancing at the Colony Hotel, the only hotel that has ever agreed to take us back. The food was even good this year!!!

Special additions to this year’s list of events included Raptors night... where we sent a ton (at least 50) of people out to see the Toronto Raptors play some basketball. Even made it on the Jumbotron...

The pub crawl was amazing. I have never seen that many people having that much fun in a long time (at least since F'rosh Nite).

Some other fun things that went on... You can always sneak into the Vanier Cup if you say you’re with the band. Never go tobogganing in a parking lot, you’ll hit a wall. The French never can find their “hot-dog Bread” Zoom ads are “student-proof”. Never mention the words $5000 to me. It didn’t happen, it was all a dream. Skini Gace. Some people get a tattoo or body piercing when they're drunk... me, I get a conference.
Once again the Skule™ Stage Band and Combo had an action-packed year as we proved that the LGMB is not the only outlet for musical frustrations. We had the opportunity to perform at many different events ranging from black-tie dinners at Hart House to Oktoberfest in the Atrium. The Stage Band entertained pre-F!rosh on U of T day, and cranked out exciting big-band dance music at Cannonball. As well, the cool, laid-back groove of the Combo was in high demand at many formal University occasions. Our two performances at Jazz at Oscar’s, in the Hart House Arbor Room, wowed the audience with a near-professional sound.

Congratulations to the individuals who took time out of their very busy schedules to participate. Hopefully, they will find their experiences in the band to be very memorable. Of course, very special thanks go to Malcom McGrath for looking after the band at the Faculty level and basically saving our hides on several occasions!

As always, we invite any musically talented individuals interested in playing to come out to our auditions in the Fall. Don’t miss out on the fun!

Andrew LaCroix  ΝΨ 9T8
Director, Skule™ Stage Band
Well it’s time to review some of the Chief Attiliator’s favourite events of the year:

• first off there was the U of T day parade when the rain almost caused a delay;
• Queen’s Orientation (you’ve never seen them hide so fast, you’d think they never had a run-in with RMC);
• who can forget the start of the Chariot Race in the middle of Godiva’s Hymn (hey BNAD you suck!...stop procrastinating);
• perhaps the most memorable was the entire guard going deaf and losing their sense of balance on top of S.F. while blowing a large load for George’s wedding.

Other events were equally memorable such as Cannon Ball (SEXY Cannon Guard!!!), SLUT party at Pritchards’ house (the beginning of the Cork Era), and of course Grad Ball (the end of the Cork Era?).

It is the C. A.’s duty to select a Cannon Guard who can be trusted to ensure the safety of the Cannon. Many thanks to all the men and women who helped maintain the Cannon’s integrity as the symbol of Skule spirit.

Overall, it has been a tremendous Honour to be able to serve YOU as the Chief Attiliator.

And remember, the MIGHTY SKULE CANNON is your symbol,

RESPECT IT!!!
HONOUR IT!!!
PROTECT IT!!!
skulenite 977
at gradball 97
Division 1 Rugby Champs
Clubs

n. 1. Weapons made of wood that can cause great harm 2. A collection of groups who merrily enjoy themselves while pretending to do work.
Objective:  
   i) Have fun.  
   ii) Don't get caught.

Apparatus/Supplies:
8 gallons of paint (preferably yellow but "ginger sesame" will do)  
blood, sweat, and polyfilla  
beer (lots)  
wiley 2nd and 3rd years  
1 fussball table  
1 coffee maker + lonely attendant  
Wednesday pizza (lots)  
1 dying stereo  
1 pop machine < ~ 50 cents  
1 T.V. (with topple proof stand!!!)  
1 used chariot, mildly tarred and feathered  
8 pushers and 1 Fardheed charioteer  
3 or 4 co-chairs  
popcorn (lots)

Procedure:
   Pipette extracurricular time against a solution of spirits-spirited students and stir under heat and pressure until peach.
   Combine beer (lots), pizza and fussball, and record increase in entropy.

Conclusions/Recommendations:
The above experiment proved very successful and extremely satisfying. This year's Club had a lot of humour, spirit, and good ideas. Everyone was genuinely committed to our twofold purpose of having fun and cultivating a professional image. We would like to thank everyone who helped out, especially Wendy Wong, Frank Matthews, Carlo Spensieri, Bernadette Zapanta, Joy Oliver, Sonia Buligan, Jagdev Bahra, Neetu Chakravarti, Gal Tennant, Alisa Ling, Mike Lo, Germain Beaudoin, and the CSChE. Thank you all for making 96-97 an unforgettable year!
96/97 was a real "horror show". Over the course of the year, the MMS club held a number of very successful smokers. Everyone is sure to remember the highlight of the November smoker when a rambunctious flrosh drank an ABSOLUTE 12 ounces of some beverage, and passed out in front of a bar (the Sundowner), and subsequently, had to be taken to hospital by ambulance. In the aftermath, the flrosh spent 2 hours saying "where do I go from here?" before leaving the hospital in shame.

The club dinner provided a barrel of laughs. When five third-year students stormed the stage and dressed the Department Chair in a traditional Scottish tartan, most people in the room experienced a serious belly laugh!

Two brown legs, and one spontaneous combustion made for a very successful ski trip. I, for one, had never seen a person burn quite so brightly before. It warmed us all on that cold winter's day.

Speaking of warm, the MMS Department was heated all spring by their new MMS T-shirts. These shirts are so nice, some students (profs?) haven't removed them since the day they got them.

After the mayhem of the year past, it was necessary to come up with a prank that was suitable to mark a year well done. The ingenuity of **** is to be commended. It was a great year.

P.S. Congratulations to the second-years for reviving the MMS chariot. How fitting that we finished in first place!
The Civ Club executive 96-97 tried to bring new life to the department this year by increasing involvement in traditional club activities and starting some new trends of their own. Things to remember:

- Survey Camp Monument—a beautiful fire pit with cedar benches was built on a rock outcrop overlooking Gull Lake. Special thanks to Steve Cairns, Terry Ramlochan, Dino Angelakos, and Shahram Mahini for all their extra efforts in making this happen.
- Coffee House Smoker—open mike performances seen ranged from opera to acoustic guitar, some comedy, and Skule™ Nite promos.
- Civ Dinner—held at the Pavilion Royale. Attendents are still raving about the food, the drink, and the fun.
- Concrete Tobaggan Race—sent a team of 30 people to participate in the national competition in Ottawa from February 5-9, 1997. A great effort was put in by all members and it was a great experience for all who were involved. Special thanks is due to Marco Petretta, the team leader.
- Civ Hockey Tournament—6 teams of both undergrads, both past and present, and graduate students competed in this fun event, special thanks to Paul Ficara for all of his organization. Special mention is also due to all members of this year’s executive:
  - Lorenzo DeSantis and Christina Guinard - Business and Advertising
  - Mark Fiscaletti and Candace DiCresce - Social and Activities
  - Tony Ciciretto - Treasurer
  - Helen Yip - Secretary
  - Joe Ramani - Vice Chair

They were a great group who put in any effort needed to make this an excellent year. The members of the CSCE, especially Rosanna Falcone and David Cassim, also deserve our thanks for all their help.

Thanks for a great four years everyone, and best of luck in the future to the CIV 9T7 grads. It’s been a blast!!!
This year, the Division of Geological and Inernal Engineering has officially become the Lassonde Program in Geological and Mining engineering and has moved to the Mining building. The renovation of the facilities and division of the program was made financially possible by a generous donation of $3.5 million from the president of Franco/Euro-Nevada lines, Mr. Pierre Lassonde. Included in these novations was a new student common room and a new computer room. The program itself will benefit through the acquisition of new teaching aids and facilities as well as new professorial positions. The student body had the opportunity to meet Mr. Pierre Lassonde who was the guest speaker at this year’s CIM (Canadian Institute of Mining) student night.

So what has the Geo Club done this year? Well...we were handed the responsibility of helping to smooth over the move to the new facilities (i.e. move furniture) as well as to provide input into what new facilities were to be made available to the students. After great consideration, Treasurer Andrew Mikitchook put the club into debt through the purchase of a cop machine both for the convenience of the students and as an investment for the future students in the program (if the program exists in 2050). Our social director, Matt Cherevaty, has organized several successful Geo Smokers with guest speakers from industry. His strategy of issuing beer after and not before the guest speaker’s lecture insured both the longevity of the smokers and the possibility of the speakers returning someday. Our sports director, Rich Gray, has provided more than ample opportunity for students to participate in organized sport. Soccer night was great fun. A fourth-year student, Paulo Lostritto, suggested we add the new position of “alumni representative” to give more students a chance to participate in the executive. Our alumni representative, Paulo Lostritto, has done an excellent job in establishing a Geo alumni database through organized phone surveys.

This year has seen both successes (our winning the food drive) and failures (our non-participation in the chariot race). Our special council of scientists on chariot design recommended that we not enter the chariot race this year due to the fact that the prototype’s defense mechanisms will “...no longer respond to the disarm subroutine and has evolved into a sentient, highly volatile force with the potential to destroy much of the Western Hemisphere...”. Good luck to all those graduating and all those returning next year to a great program.
As the Executive Council for the Electrical and Computer Engineering Club looks back on a year gone by, it was a year where much was accomplished; though there still remains much work in the months ahead (as of publication date Jan. 1997). With strong leadership and organization, the Club fostered a real sense of involvement and interaction among the student body of Electrical and Computer Engineering.

The year began with a "Notes Exchange" Smoker designed to make past years' notes, quizzes, and labs available to all ECE students from Frosh to 3rd years. The result was an overwhelming success—it was generally agreed that the "Notes Exchange" made life a whole lot easier for everyone who had a share in the arrangement. In addition to the obvious benefit of having labs and quizzes already prepared for the students, it was a great opportunity to get out, meet and network with ECE students from all years—1st to 4th inclusive. Our PONG smoker was another big hit in the weeks that followed.

The ECE dinner dance at the Clarion Essex had a terrific turnout this year. Professor Dmitrevsky put on another display of his raw dancing talent that night and got everyone grooving on the dance floor. Special thanks goes out to our Social Directors who worked very hard to put together this successful event.

The 3rd year class went on the legendary annual field trip to Ottawa and had a great time. Thanks to the great effort by the club's Vice-Chairs.

The "monthly" (whenever we had a chance to publish it) newsletter The Short Circuit served to publicize and to "get the message out" concerning all facets of skule™ life as pertaining to ECE. As a mixture of information, entertainment, and propaganda, The Short Circuit embodied the true meaning of freedom of expression—vive la presse libre!

We, the Club Executive would each, personally, like to thank the CHEMs who stole what they thought was our Chariot, but was, in fact, a pile of wood lying in the corner of our Common Room which we had been too lazy to throw out ourselves. Thank you. As for the Chariot Race, well, let it be known that ECE is second-to-none. WE WON... by a LOT. Thanks to everyone who came out and grease-up for the Chariot Race, handing out beats, as well as handing out mouths full of grease, displaying BRUTE FORCE to take on all comers and beat back all challengers. The sight of the Civil chariot flying into the air after a head on collision with our decoy wedge chariot was unforgettable. ECE RULES! That day exemplified the best of ECE—many members, each with a role to play, pulling together with a one common goal: to make ECE #1.

The Common Room experienced something of a renaissance in January and -re-affirmed it as the focal point of student activity within ECE. The new look Common Room was host to a number of Smokers and "sports" tournaments later in the year.

We, the members of the Executive Council for Electrical and Computer Engineering count it as our privilege to have served the students of ECE in our respective capacities. We are proud to leave behind a great tradition for those who are returning.
Well, that's it, it's all over, we are done, we are at of here! (well, actually, not really; as I write this only mid-January, but for dramatic purposes I'll pretend it's the end of the year). Looking back over the last year, I realize just how many people there are who deserve thanks for helping the club run smoothly. First of all there are the her members of the Executive who, in addition to performing all of their particular duties, reminded me the importance of delegating responsibility. As a built, we were able to accomplish a great deal more than the four of us could ever do.

This year's dinner dance was a great success. It as held in a very cool room at the Colony Hotel, complete with a revolving floor (which thankfully failed to make anybody seriously nauseous), live dinner music and a sweet little grand piano for our own aeternos to play with. Thanks to our coordinators, Becky Smith and Kostas Pagaitzis for a very classy event.

We managed to pull off a string of successful nokers, with movies, snacks and refreshing Everages for all. Eng Sci being such a mixed bag of jits, movie choices ranged from "Seven" to "Toy Story" to "The Rocky Horror Picture Show" and of course, let us not forget that old smoker classic, "The Life of Brian" (at the time of this writing, we're gearing up for the soon-to-be-immortalized-in-song Beach Noker).

There were a few notable changes to the common room this year, starting off with a shiny new coat rack, created by Aldona Wiacek, and the dawn of the age of the Sandwich Maker, made possible by the Brothers Grinspun. This year also saw the birth and death of the Honour Bar; the snack counter that briefly made chocolate bars and chips a staple of the Eng Sci diet. But perhaps the most notable addition to the common room are chess tables, hand painted by an artistic crew spearheaded by Andrew May (our Vice-Chair), Anna Galea, and Andrea Nagy.

The Chariot Race was, once again, a smashing success for the Eng Sci crew. Although we were deprived, through craven deception, of the support of most of our thunderous army of frosh (200 strong), we still managed to hold our own and race to victory! [of course, no official winner has been declared as I write this, so I am still free to claim victory without risking sanctions]. Our small but proud squad of enrollees fought with the strength of giants, and ground all opposition ruthlessly into the dirt. The chariot itself, which set a record for organic decoration, was enough to dissuade the faint of heart. Thanks to Vlad and Amir Meidan for their vision and almost total lack of qualms.

We had a chess tournament again this year, with resident wizard Professor Vranesic taking on 18 challengers simultaneously, with opponents ranging from frosh Wunderkinden, to Professors. The final body count: 13 victories, 3 draws, and 2 losses for the good Professor.

Social events for the year included a pleasant bout of pre-chariot race violence at Sergeant Splatter's, a fabulous basketball tournament which solidified forever the athletic supremacy of the class of 9T7 (okay, it hasn't actually happened yet, but the outcome seems pretty clear to ME) and a ski trip at which NO legs were broken (again, I'm anticipating).

For the class of 9T7, this is the end of the ride. A major transition for the lot of us (especially those who aren't planning to go to grad school). It's a big time for all of us, with the class of 9T6 waiting in the wings to remind us that most "active" century in human history is rapidly drawing to a close. It's time for one more class of rampaging Engineers to go and see about the work of shaping that future.

Exwnt, class of 9T7.

Greetings to all Indys above and below.

This year was an interesting year for the Indy Club. We are learning to understand the implications of a merger as it pertains to identity, community and sobriety. On a lighter note, the Indy common room was beautifully renovated to reflect our colourful nature early in the year. Special thanks to Rasha, Isabel, Sharone Malone, Freddy B. and even Big Sam (at first) for their contributions. The 2nd Annual Mech/Indy Dinner was delightful despite the financial burden, right Vince? Our highlight once again, was the CSIE conference in Windsor, where one of our 3rd year explored the perils of riding the elevator between the different levels of hell and one of our 4th years was institutionalized. Our recruitment smokers got us some more jobs and high school students became the object of our recruit. Special thanks to the Indy Club members: Alessio “the hammer” Marchesi, Errol “Erman” Armand, Lisa Orchanin and Nadine Kerrigan. Lastly, very special thanks to the Gettoni table for delivering us from evil.

Happy Holidays
The Mech Club had a good year (or so we hear).

Skule™mates, my name is Mario Baker Da’Chief of Da’Brute Force Committee. We da BFC (Note: the BFC does not exist, never has, and never will) are entrusted with da responsibility of upholding da tradition, spirit and da application of power that has been and always will be ours, da students.

At da beginning of da year are goal was to show you, that there is a superior body of power that will stand up for those that have been wronged by the oppression of the establishment (FIGHT THE MAN). I’m happy to report that the Dean has been good this year. Good job Mike! I call upon the power of the student body to carry on our mission—tradition, strength and the spirit of Skule™, you can do your part by getting involved.

During Godiva Week, I was informed that a group lead by “Lady GoDiva” (LGD), have taken interest in preserving and increasing Skule™ Spirit. I encourage these students to continue their quest. Long live Lady GoDiva.

Mario Baker and the Ministers of the BFC.

INNOVATION
RIGHT FROM THE START

That’s what S&C Electric and the University of Toronto Faculty of Engineering have in common. Each of us has the same commitment to initiate innovative concepts in our field of speciality.

S&C Electric has brought to the industry a steady succession of unique products pioneering new applications and contributing to the improvement of operating practices for electric-utility, commercial and industrial power systems at voltages ranging from 5,000 volts through 500,000 volts.

In turn, the University of Toronto Faculty of Engineering, since its inception, has been the pioneer of co-operative education which has provided a vital fundamental link between academic studies and practical experience.

You have acquired a rich heritage and a bright future, congratulations.

ERICSSON

It’s about communications between people.

The rest is technology.

Ericsson, an international leader in telecommunications, with over 85,000 employees and operations in over 110 countries, generates $11 billion in sales every year, from cellular systems and data networks, to satellite phones and central office switching systems. Ranked number one, commanding over 40% of the world’s market in cellular systems, Ericsson’s investment in developing leading edge technology has positioned it well for the next century.

After 43 years in Canada, Ericsson Communications Inc. has grown to be a $350 million a year enterprise able to offer complete, totally integrated solutions for any communications need. We have over 1,100 employees working from two divisions: Ericsson Communications Canada, the sales and distribution centre, located in Mississauga, and Ericsson Research Canada in Montreal, where over 700 engineers hold the worldwide mandate for developing the company’s cellular software systems used throughout North America. Ericsson is so committed to research and development that Ericsson Research Canada now ranks in the top 5 companies in R&D.

Perhaps this is why so many of Canada’s best and brightest are choosing Ericsson to launch their careers.

---

**TECHNOLOGY FOR THE 21ST CENTURY**

When it comes to innovation and quality, Canadian Marconi Company is a recognized leader worldwide. A prominent electronics exporter, our reputation is built on the innovative design and quality production of avionics, communications, electronic components, radar and ground navigation systems.

---

**A Work Atmosphere Like No Other**

Symantec Corporation is an international organization of immeasurable global strength and innovation. Devoted to the development, manufacturing, marketing and support of computer software for individuals and companies, we have become the industry leader in desktop utility software for both the PC and Macintosh platforms. We attribute our phenomenal success to the entrepreneurial instincts and explorer mentality of our 2200 team members across the world.

But let's face it. Up here in Toronto we're really the centre of high-tech action. Our work environment is something like the Twilight Zone: the pace is light-speed but fun, free thought abounds and the greatest thrill is doing big business in the most explosive markets around. It's this shoot-for-the-stars mentality that makes us the industry leader in both fax and remote communications software development. WinFax PRO 7.0, PCAnywhere, CyberJack, CommSuite 95 – our current successes; household names known around the globe. How will you contribute?

Graduation is just around the corner and approaching quickly. Are you prepared? As you begin to think about how you're going to put your graduate business degree to use in the real world, decide if you're a person who goes where no one has gone before, or just asks, "What happened?"

Memory, Memory Everywhere

Since 1985 MOSAD has established a leadership position in the design and fabrication of memory intensive integrated circuits. Recognized for innovation and excellence, MOSAD is the leading independent memory chip design house and manufacturer. A leader in the industry, MOSAD is renowned for engineering applications. Our customers include the top memory chip manufacturers in the world.

Designing Memory Testing Memory

New graduates of Computer Science or Electrical Engineering. You will find MOSAD's niche in the high tech market a challenging and rewarding work environment. You will work with our talented team to shape the future of technology.

Gennum Corporation is a successful, Canadian high technology company which designs, manufactures and markets high performance integrated circuits and hybrid assemblies for specialized applications. Its primary products include video distribution and signal processing components targeted at the professional video equipment market, and low voltage and miniature audio components for the world hearing instrument industry.

Through a dedication to quality and excellence in every facet of its business, Gennum has established and maintained a reputation as a world leader in its markets in the design, manufacture and processing of silicon ICs and thin film hybrid circuits.

The company, since its inception in 1973, has grown steadily and the business has been consistently profitable. Operations are housed in two custom-built facilities in Burlington, Ontario.

Research and development is an ongoing priority and Gennum commits 20 - 25% of revenue per year in support of these activities. It also invests significantly in ongoing training at all levels to develop and maintain the skills of its workforce. Gennum currently employs a staff of over 260 people of which more than 50% are engineers, scientists and technologists.

To learn more about exceptional career growth and development opportunities in Gennum Corporation's exciting and challenging future, please contact its Human Resources professionals. They will be pleased to talk with you.

Consumers Gas
DIVERSITY IS OUR STRENGTH

Skill, experience and integrity have made Consumers Gas the supplier of choice for over 140 years. With assets of $2 billion, our client base consists of over 1 million residential, commercial and industrial customers. As Canada's largest distributor of natural gas, we are committed to maintaining our leadership by developing our people to achieve their full potential.

As the market for natural gas continues to expand, so do the opportunities for our team of highly skilled employees. Combined with our considerable financial strength, the result is success.

If you are a talented and motivated individual looking for a career, consider a future with us. Please drop by to see us, or forward your resume to:

Earn the Right to put P.Eng. beside your name.

Today's engineers are managers of technology, guiding Canada into the 21st century. For these roles an engineering degree is not enough. You should also have the P.Eng. designation. It shows employers you are serious about your responsibility to society and puts you on the road to career advancement.

To be licensed as a Professional Engineer, you must have a bachelor's degree from an accredited engineering course, engineering experience, and a demonstrated knowledge of ethics and engineering law.

Professional Engineers Ontario wishes to remind you that graduates who apply after July 31, 1996 and up to June 30, 1998 will need to demonstrate three years (36 months) of satisfactory engineering experience to become licensed Professional Engineers. In all cases, your experience start date will coincide with the date your degree is conferred.

Professional Engineers Ontario is the association that regulates the profession in the province. Call us for more information:

Professional Engineers Ontario

ARRAY, a rapidly growing Canadian software engineering company, has earned an unparalleled reputation for innovation and imagination in highly sophisticated, custom software development and systems integration for complex real-time signal and image processing applications.

Array produces operational systems for four main product/service areas:

- Defence
  - airborne, fixed array, and towed array acoustic processing systems
  - airborne real and synthetic aperture radar processing systems
  - shipboard damage control systems
  - mission simulators
  - acoustic replay systems
- Remote Sensing/Space
  - satellite ground stations
- Security
  - real-time computer vision system
- Traffic Management
  - traffic control systems
  - vehicle monitoring systems

Career opportunities are available for the following positions:

- SOFTWARE ENGINEERS • SYSTEMS ENGINEERS
- HARDWARE ENGINEERS • TEST ENGINEERS
- RADAR/SAR ENGINEERS
- SOFTWARE QUALITY ASSURANCE ENGINEERS
- UNIX SYSTEM ADMINISTRATORS

History . . . Technology . . . Opportunity . . . The Hudson's Bay Company has what it takes to offer systems professionals a stimulating and rewarding career. The Hudson's Bay Company was incorporated in 1670, which makes it the oldest incorporated merchandising company in the world.

Technology means challenge! As part of our Information Services Division, you share in the responsibility for over 80 major application systems. These systems support the Bay and Zellers as well as the Corporate functions. Our team consists of approximately 400 individuals operating out of Toronto.

The data processing environment provides an exciting, challenging environment in an IBM, MVS/ESA host environment utilizing DB2 and IDMS databases with access through CICS and TSO/ISPF.

Our commitment to current technology includes a coast-to-coast communication network linking the department stores and distribution centers to the Toronto computing facility. The network is multi-protocol, including TCP/IP and SNA and uses satellite technology for many of our stores.

Apply your talents and expertise with a company that offers a progressive workplace, a competitive compensation package, and a generous discount. Submit your resume to:

Human Resources, Hudson's Bay Company, Information Services, 698 Lawrence Avenue West, 2nd Floor, Toronto, Ontario M6A 3A5,
Fax: (416) 256-2434

Uniting Vital Technologies

Alfa Laval Inc. manufactures industrial process equipment that increases production efficiency while protecting the environment.

Our areas of expertise are centrifugal separation, heat transfer, fluid handling and automation. Our strength is the integration of technologies to provide total solutions.

Alfa Laval Inc. strives to be the preferred supplier in its many global markets. We are committed to customer satisfaction. In our products, in our people, we continue a tradition of excellence that goes back to 1883

Uniting vital technologies has made, and will continue to make, Alfa Laval Inc. a global leader.
